

Traffic Impact Study

Proposed Warehouse/Distribution Development

Arlington Heights, Illinois

Prepared For:

August 6, 2021

1. Introduction

This report summarizes the methodologies, results, and findings of a traffic impact study conducted by Kenig, Lindgren, O'Hara, Aboona, Inc. (KLOA, Inc.) for a proposed warehouse/distribution development to be located in Arlington Heights, Illinois.

The site, which is currently located approximately 1,100 feet north of Dundee Road to the north and east of the Lexus of Arlington auto dealership, is currently occupied by surface parking lots. As proposed, the site will be redeveloped with two warehouse/distribution buildings totaling approximately 511,664 square-feet. Access to the development will be provided via two full movement access drives off Wilke Road and via a full movement access drive off Kennicott Avenue. Additional access to the development will be provided via a connection to the existing access roadway located on the north side of the Arens Controls building, however, this access will be utilized as emergency access only.

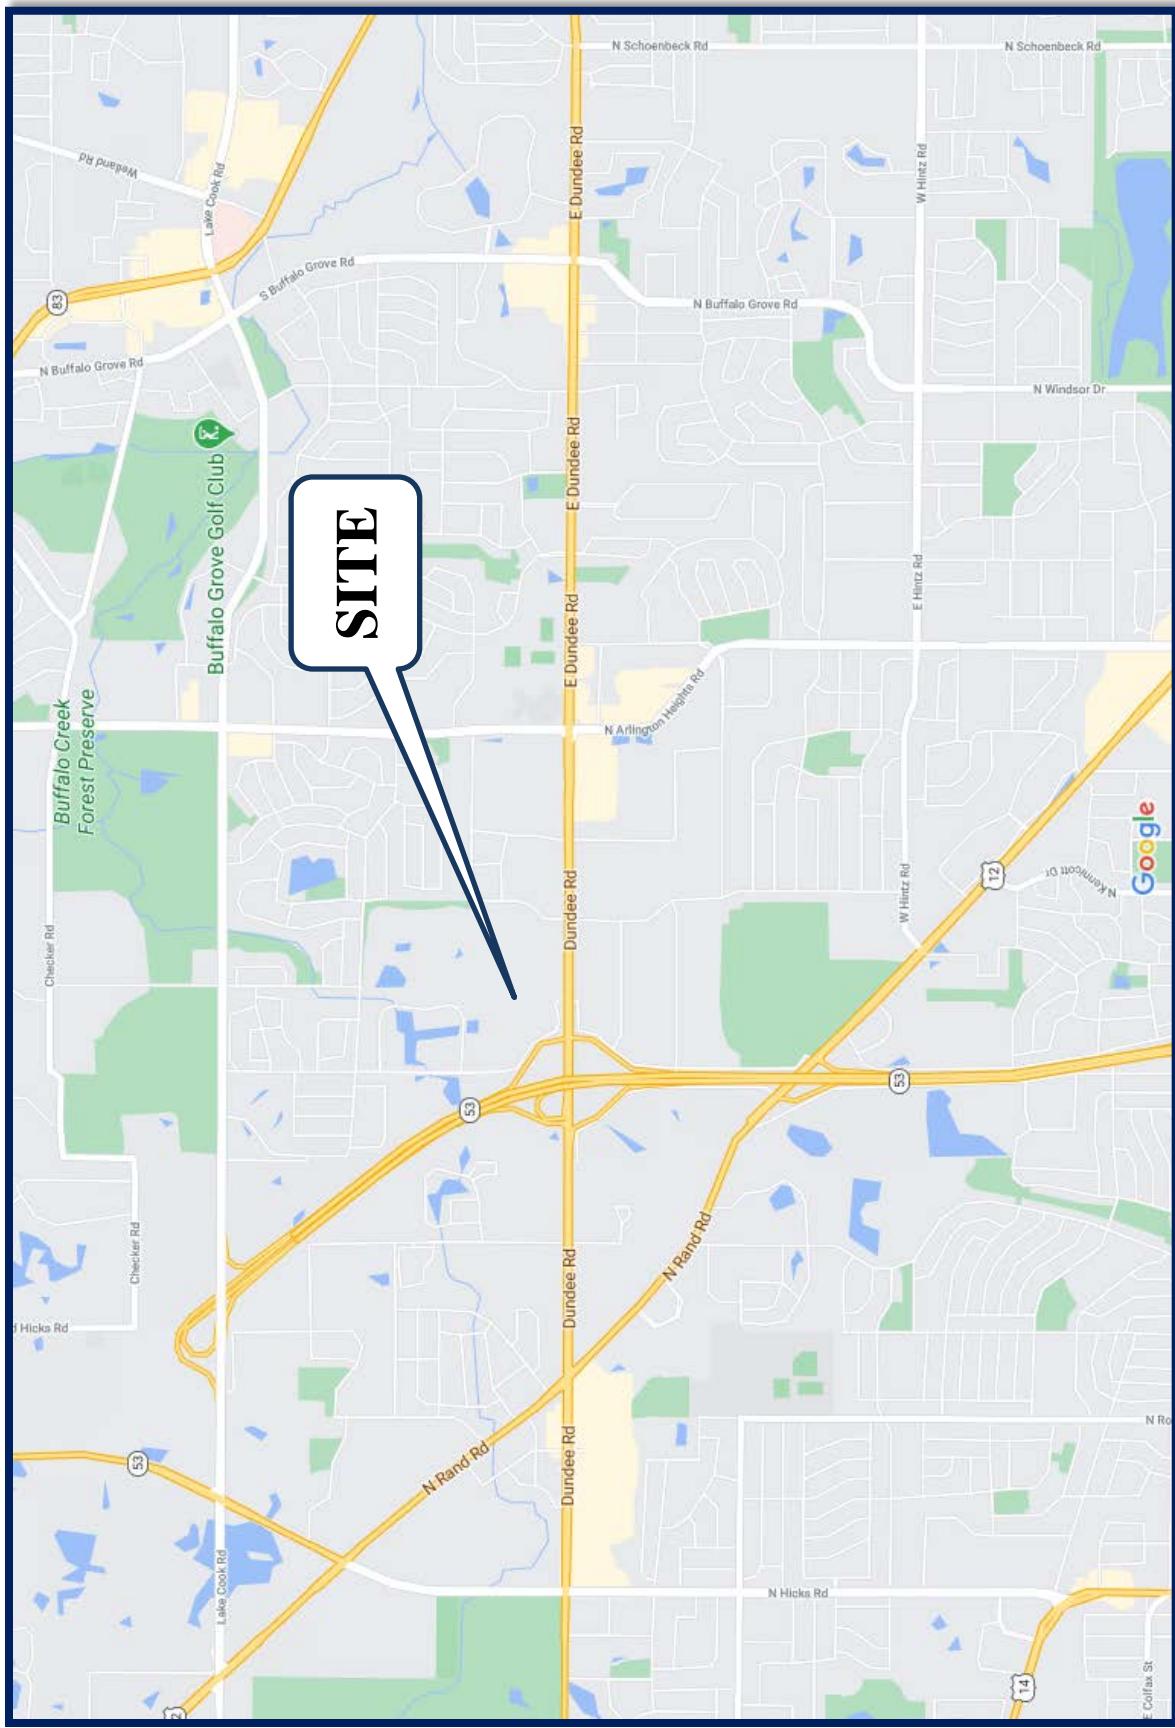

The purpose of this study was to examine background traffic conditions, assess the impact that the proposed development will have on traffic conditions in the area, and determine if any roadway or access improvements are necessary to accommodate traffic generated by the proposed development. **Figure 1** shows the location of the site in relation to the area roadway system. **Figure 2** shows an aerial view of the site. The sections of this report present the following:

- Existing roadway conditions
- A description of the proposed development
- Directional distribution of the development traffic
- Vehicle trip generation for the development
- Future traffic conditions including access to the development
- Traffic analyses for the weekday morning and weekday evening peak hours
- Recommendations with respect to adequacy of the site access and adjacent roadway system

Traffic capacity analyses were conducted for the weekday morning and evening peak hours for the following conditions:

1. Year 2021 Base Conditions – Analyzes the capacity of the existing roadway system using existing peak hour traffic volumes in the surrounding area, adjusted to reflect pre-COVID-19 conditions.
2. Year 2027 No-Build Conditions – Analyzes the capacity of the future roadway system using projected traffic volumes that include the existing traffic volumes and ambient area growth not attributable to any particular development.
3. Year 2027 Total Projected Conditions – Analyzes the capacity of the future roadway system using the projected traffic volumes that include the existing traffic volumes, ambient area growth not attributable to any particular development, and the traffic estimated to be generated by the full buildout of the proposed development.

Arlington Heights, Illinois

2. Existing Conditions

Existing transportation conditions in the vicinity of the site were documented based on field visits conducted by KLOA, Inc. in order to obtain a database for projecting future conditions. The following provides a description of the geographical location of the site, physical characteristics of the area roadway system including lane usage and traffic control devices, and existing peak hour traffic volumes.

Site Location

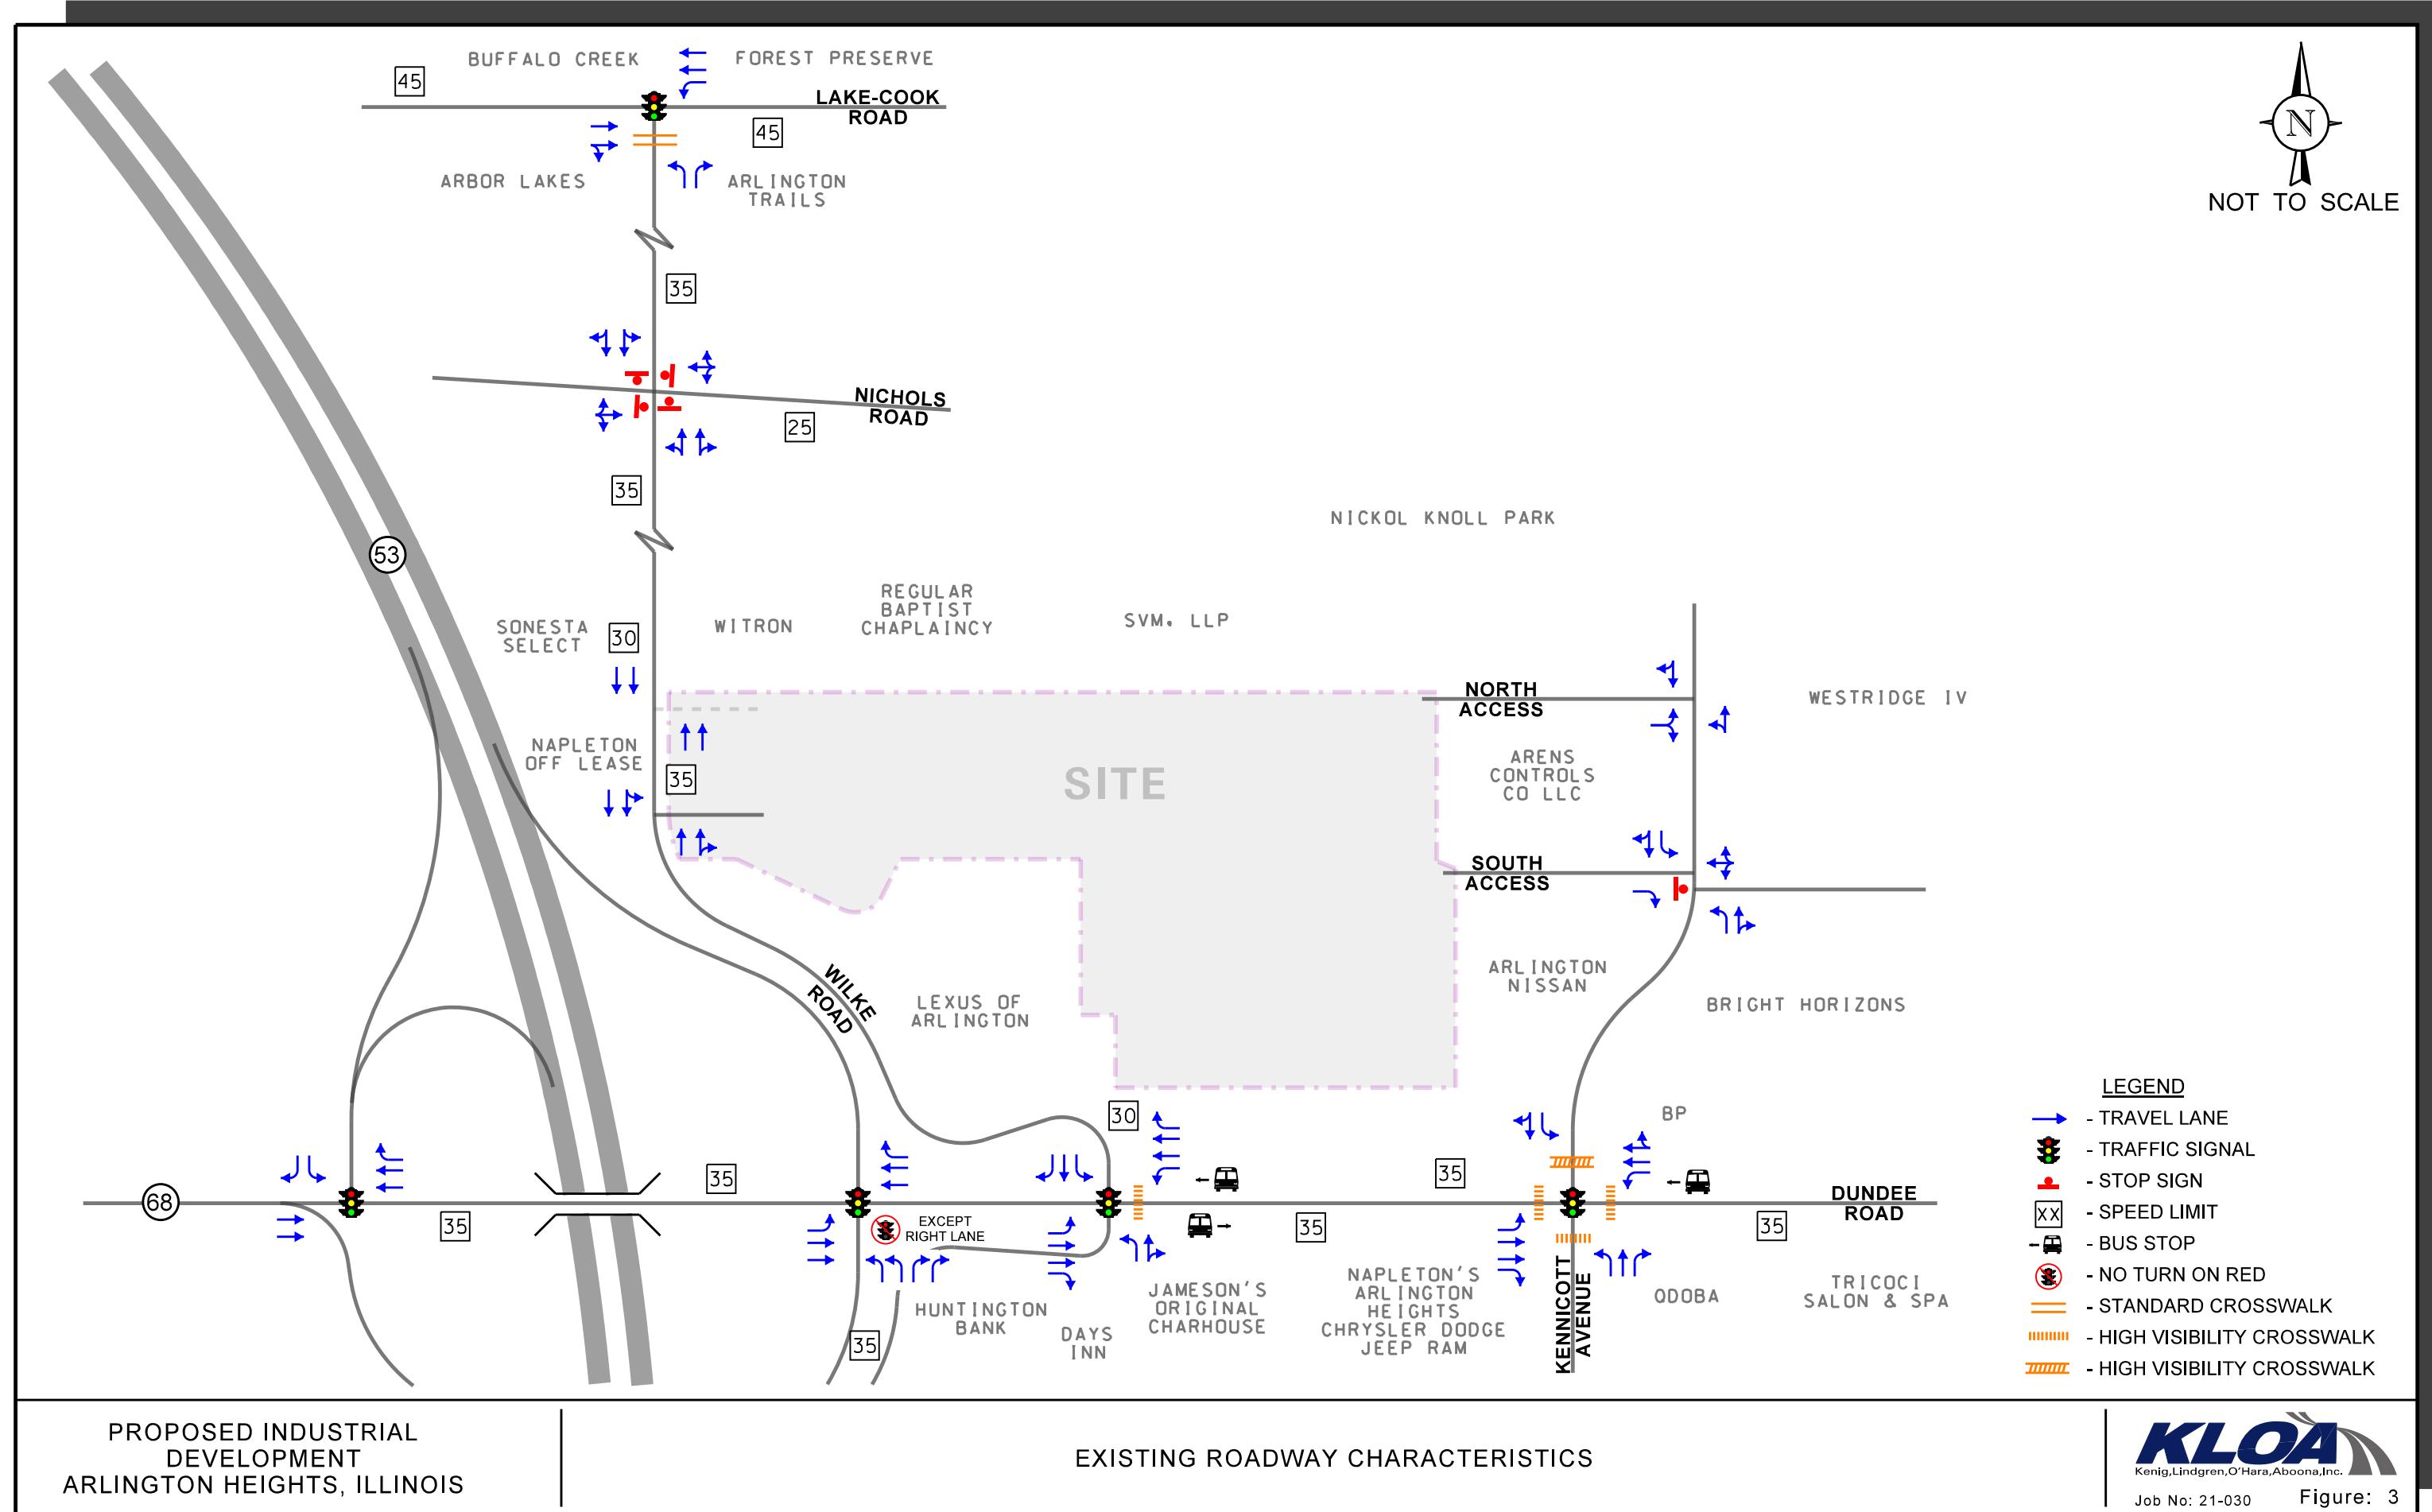

The site is located on the north side of Dundee Road, approximately 1,500 east of IL Route 53, within the Arlington Business Park in Arlington Heights, Illinois. The site is bordered by Witron Pointe, Regular Baptist Chaplaincy, SVM, LP and Nickol Knoll Park to the north, the industrial building at 3602 North Kennicott Avenue and Arlington Nissan to the east, Lexus of Arlington to the south, and Napleton Off Lease and Sonesta Select Arlington Heights North to the west.

Roadway System Characteristics

The characteristics of the existing roadways near the development are described below and illustrated in **Figure 3**.

IL Route 53 is a north-south freeway that provides three travel lanes in each direction. IL Route 53 has a signalized interchange with Dundee Road. At its signalized intersections with Dundee Road, the northbound off ramp provides dual left-turn lanes and dual right-turn lanes, and the southbound off ramp provides an exclusive left-turn lane and an exclusive right-turn lane. Turning movements onto the northbound on ramp are under traffic signal control and right-turning movements onto the southbound on ramps operate under free flow conditions. IL Route 53 is under the jurisdiction of the Illinois Department of Transportation (IDOT) and carries an annual average daily traffic (AADT) volume of 85,200 vehicles of which 4,200 vehicles are trucks (IDOT 2019).

Dundee Road (IL Route 68) is an east-west other principal arterial roadway that in the vicinity of the site provides two travel lanes in each direction. At its signalized intersection with the IL 53 southbound ramps, Dundee Road provides two through lanes on the eastbound and westbound approaches. At its signalized intersections with the IL 53 northbound ramps, Dundee Road provides an exclusive left-turn lane and two through lanes on the eastbound approach and two through lanes and an exclusive right-turn lane on the westbound approach. At its signalized intersection with Wilke Road, Dundee Road provides an exclusive left-turn lane, two through lanes, and an exclusive right-turn lane on the eastbound and westbound approaches. At its signalized intersection with Kennicott Avenue, Dundee Road provides an exclusive left-turn lane, two through lanes, and an exclusive right-turn lane on the eastbound approach and an exclusive left-turn lane, a through lane, and a shared through/right-turn lane on the westbound approach. Dundee Road is under the jurisdiction of IDOT, carries an AADT volume of 25,700 vehicles of which 800 vehicles of trucks (IDOT 2019), and has a posted speed limit of 35 miles per hour.

DEVELOPMENT
ARLINGTON HEIGHTS, ILLINOIS**

EXISTING ROADWAY CHARACTERISTICS

KLOA
Kenig,Lindgren,O'Hara,Aboona,Inc.
Job No: 21-030 Figure: 3

Lake Cook Road is an east-west other principal arterial roadway that in the vicinity of the site provides two travel lanes in each direction. At its signalized intersection with Wilke Road, Lake Cook Road provides a through lane and a shared through/right-turn lane on the eastbound approach and an exclusive left-turn lane and two through lanes on the westbound approach. Lake Cook Road is under the jurisdiction of the Cook County Department of Transportation and Highways, carries an AADT volume of 49,900 vehicles of which 2,900 vehicles are trucks, and has a posted speed limit of 45 miles per hour.

Kennicott Avenue is a north-south minor collector roadway that in the vicinity of the site provides one travel lane in each direction. At its signalized intersection with Dundee Road, Kennicott Avenue provides an exclusive left-turn, a through lane, and an exclusive right-turn lane on the northbound approach and an exclusive left-turn lane and a shared through/right-turn lane on the southbound approach. Kennicott Avenue is under the jurisdiction of the Village of Arlington Heights, carries an AADT volume of 4,300 vehicles of which 385 vehicles are trucks.

Wilke Road is a north-south frontage roadway that extends from Rand Road to the south up to Lake Cook Road on the north. In the vicinity of the site, Wilke Road provides two travel lanes in each direction and has a boulevard cross section between the south leg of Ventura Drive and Nichols Road. At its signalized intersection with Dundee Road, Wilke Road provides an exclusive left-turn lane, a through lane, and an exclusive right-turn lane on the southbound approach and an exclusive left-turn lane and a shared through/right-turn lane on the northbound approach. At its signalized intersection with Lake Cook Road, Wilke Road provides an exclusive left-turn lane and an exclusive right-turn lane on the northbound approach. At its all-way stop-sign controlled intersection with Nichols Road, Wilke Road provides a shared left-turn/through lane and a shared through/right-turn lane on the northbound and southbound approaches. Wilke Road is under the jurisdiction of the Village of Arlington Heights and has a posted speed limit of 30 miles per hour along the site frontage.

Nichols Road is an east-west local roadway that in the vicinity of the site provides one travel lane in each direction. At its all-way stop-sign controlled intersection with Wilke Road, Nichols Road provides a shared left/through/right-turn lane on the eastbound and westbound approaches. Nichols Road is under the jurisdiction of the Village of Arlington Heights and has a posted speed limit of 25 miles per hour.

Traffic Signal Interconnect

The traffic signals along Dundee Road (IL 68) that are included in this study are part of a ten-signal interconnect system that is maintained by IDOT. The system runs from the traffic signal at Baldwin to the west to the Weidner/Crofton intersection to the east. The intersection of Dundee Road and Arlington Heights Road is the master controller. All the traffic signals operate at a 140 second cycle length during the weekday morning and evening peak hours.

Existing Traffic Volumes

In order to determine current traffic conditions in the vicinity of the site, KLOA, Inc. conducted peak period classification and traffic counts using Miovision Scout Video Collection Units on Tuesday, February 16, 2021 during the weekday morning (7:00 A.M. to 9:00 A.M.) and weekday evening (4:00 P.M. to 6:00 P.M.) peak periods at the following intersections:

- Dundee Road with IL 53 Southbound Ramps
- Wilke Road with Lake Cook Road
- Wilke Road with Nichols Road
- Kennicott Avenue with Northerly Access Easement
- Kennicott Avenue with Southerly Access Easement

The results of the traffic counts showed that the weekday morning peak hour of traffic occurs from 7:15 A.M. to 8:15 A.M. and the evening peak hour of traffic occurs from 4:45 P.M. to 5:45 P.M.

Given the ongoing COVID-19 pandemic, it is anticipated that traffic volumes in the study area do not reflect normal or typical conditions. As such, the 2020 traffic counts were supplemented with counts previously conducted by KLOA, Inc. utilizing Miovision Scout Video Collection Units at the intersections of Dundee Road with the IL 53 Northbound Ramps, Dundee Road with Wilke Road, and Wilk Road with Kennicott Avenue. These counts were conducted during the weekday morning and weekday evening peak periods in June 2017. The Year 2017 were increased by a regional growth factor, as discussed later, for four years to estimate Year 2021 traffic volumes.

To account for any potential decrease in traffic due to the ongoing COVID-19 conditions, the traffic volumes among Dundee Road were balanced to the highest volumes and the traffic volumes along Lake Cook Road and the through volumes on Wilke Road were increased by 54 percent during the weekday morning peak hour and 58 percent during the weekday evening peak hour based on the Dundee Road increases based on balancing.

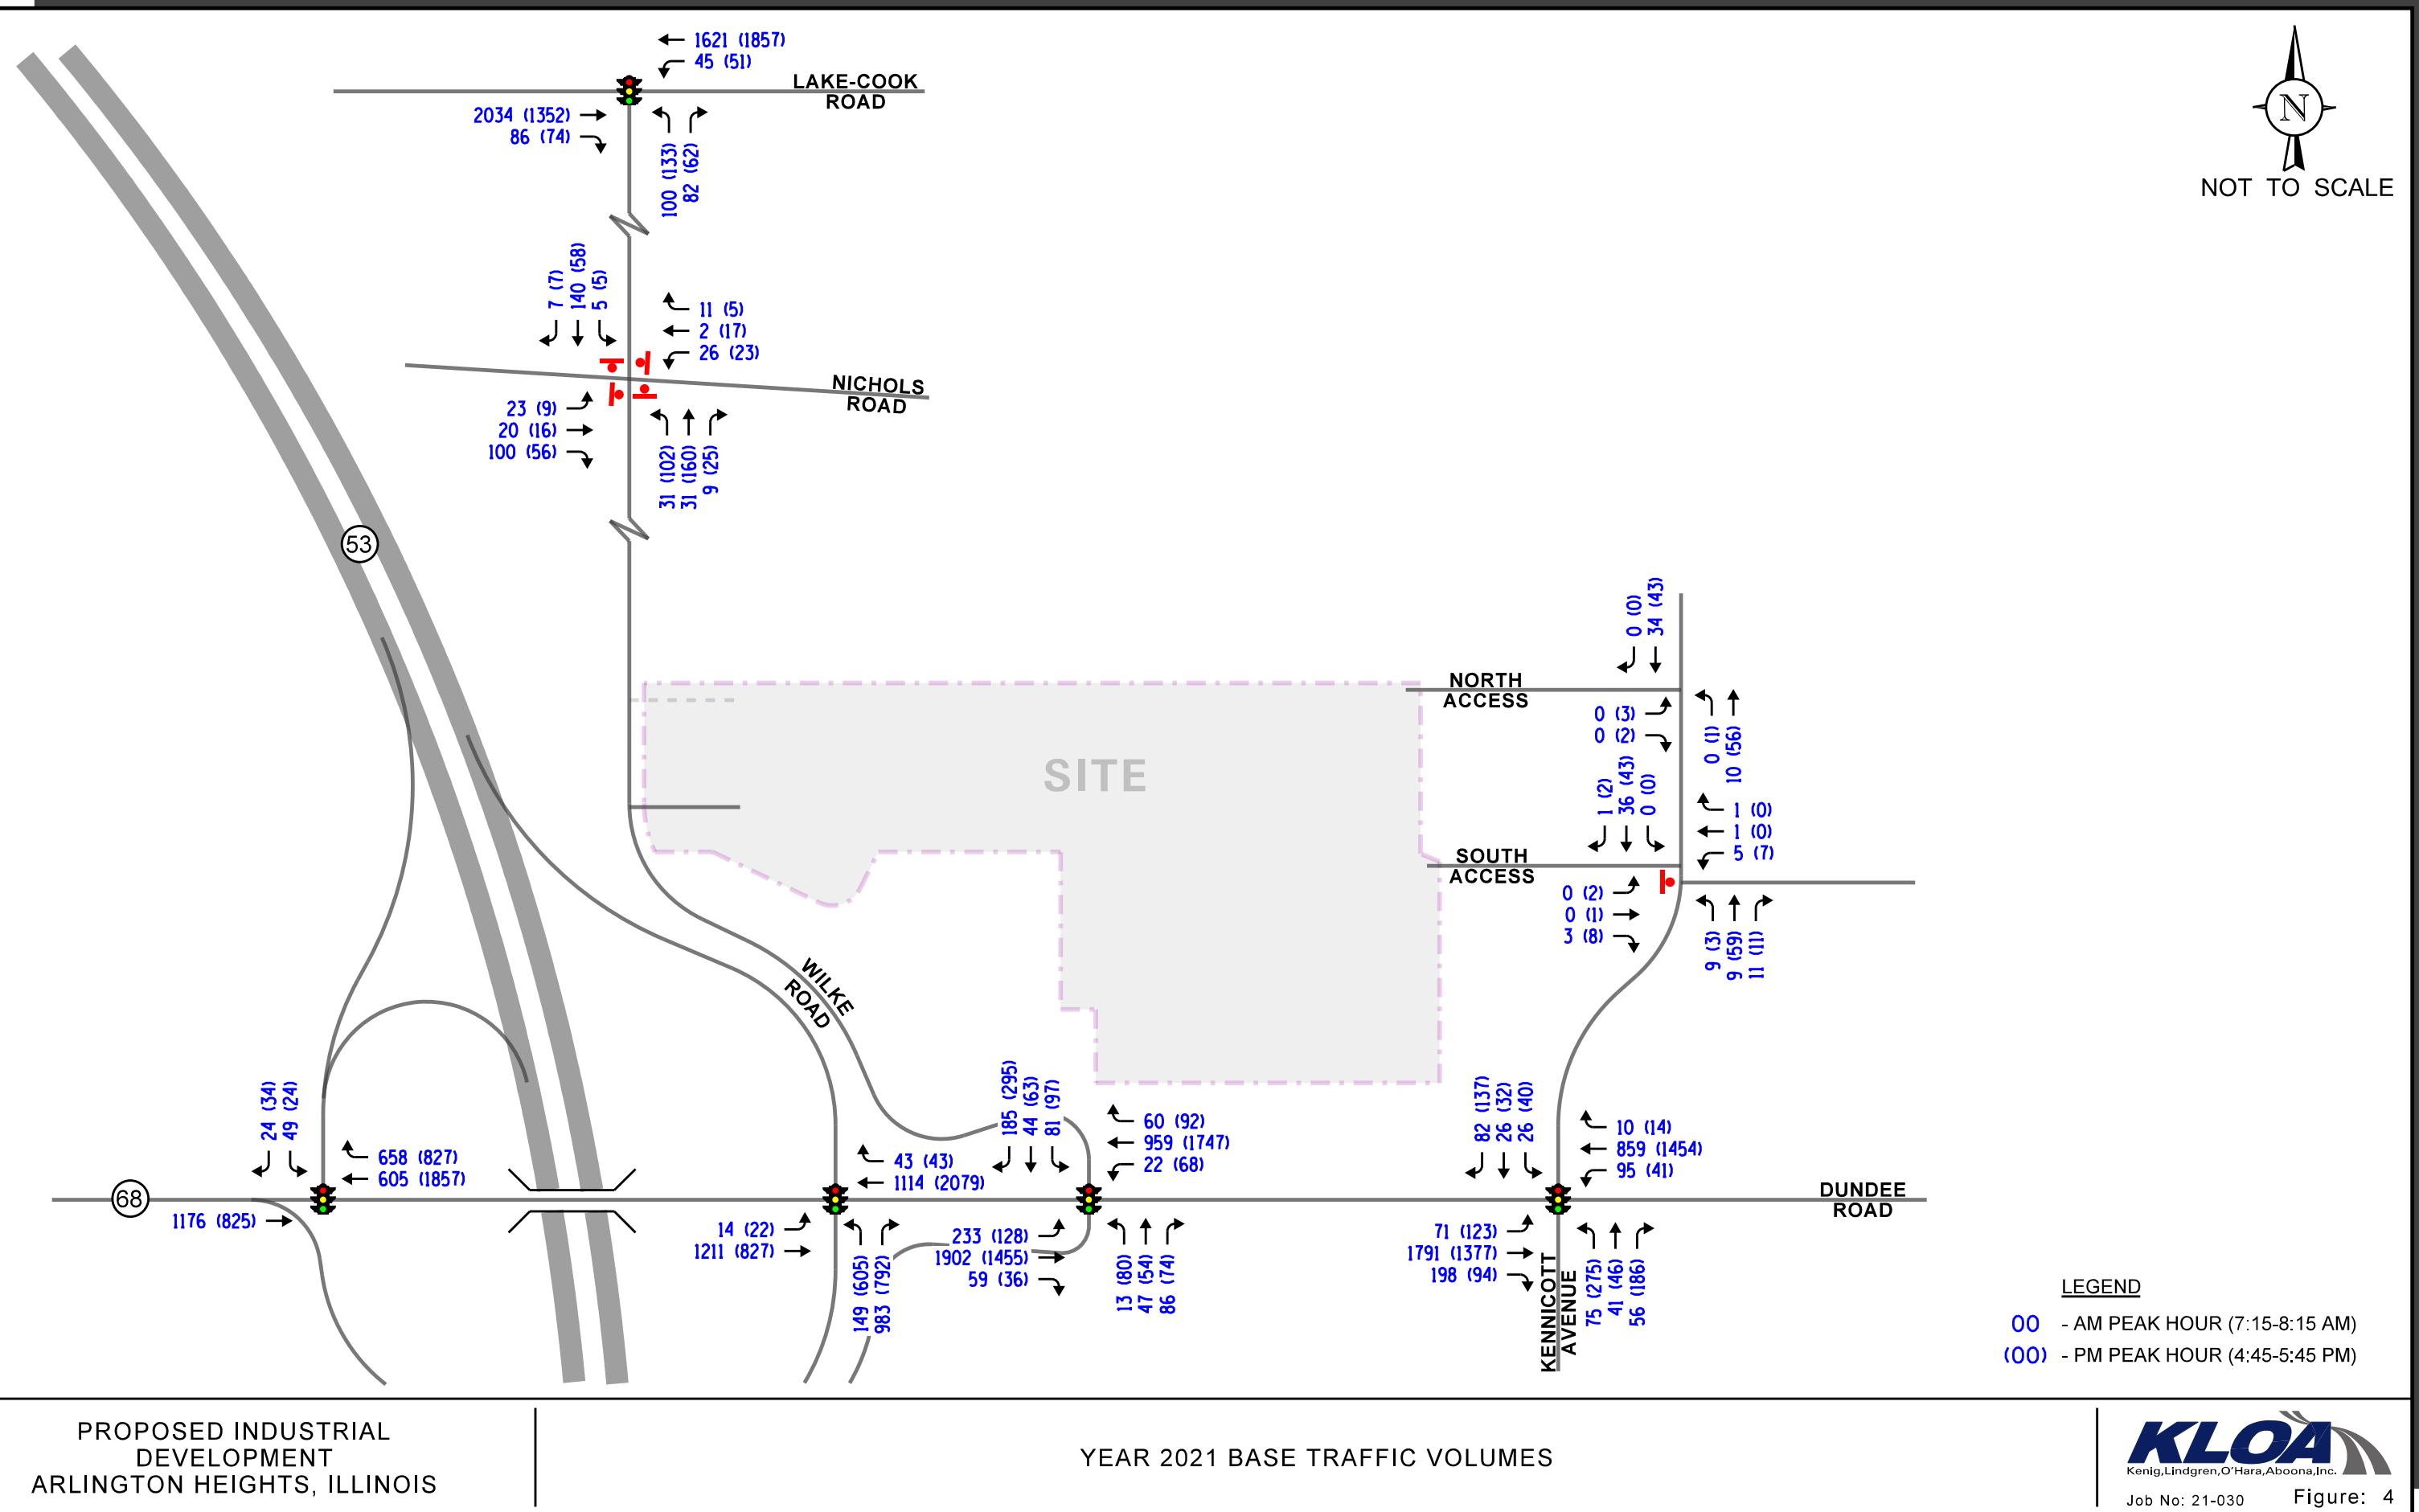

The Year 2021 base traffic volumes inclusive of heavy vehicles are shown in **Figure 4**. The existing heavy vehicle peak hour volumes are shown in **Figure 5**.

Crash Analysis

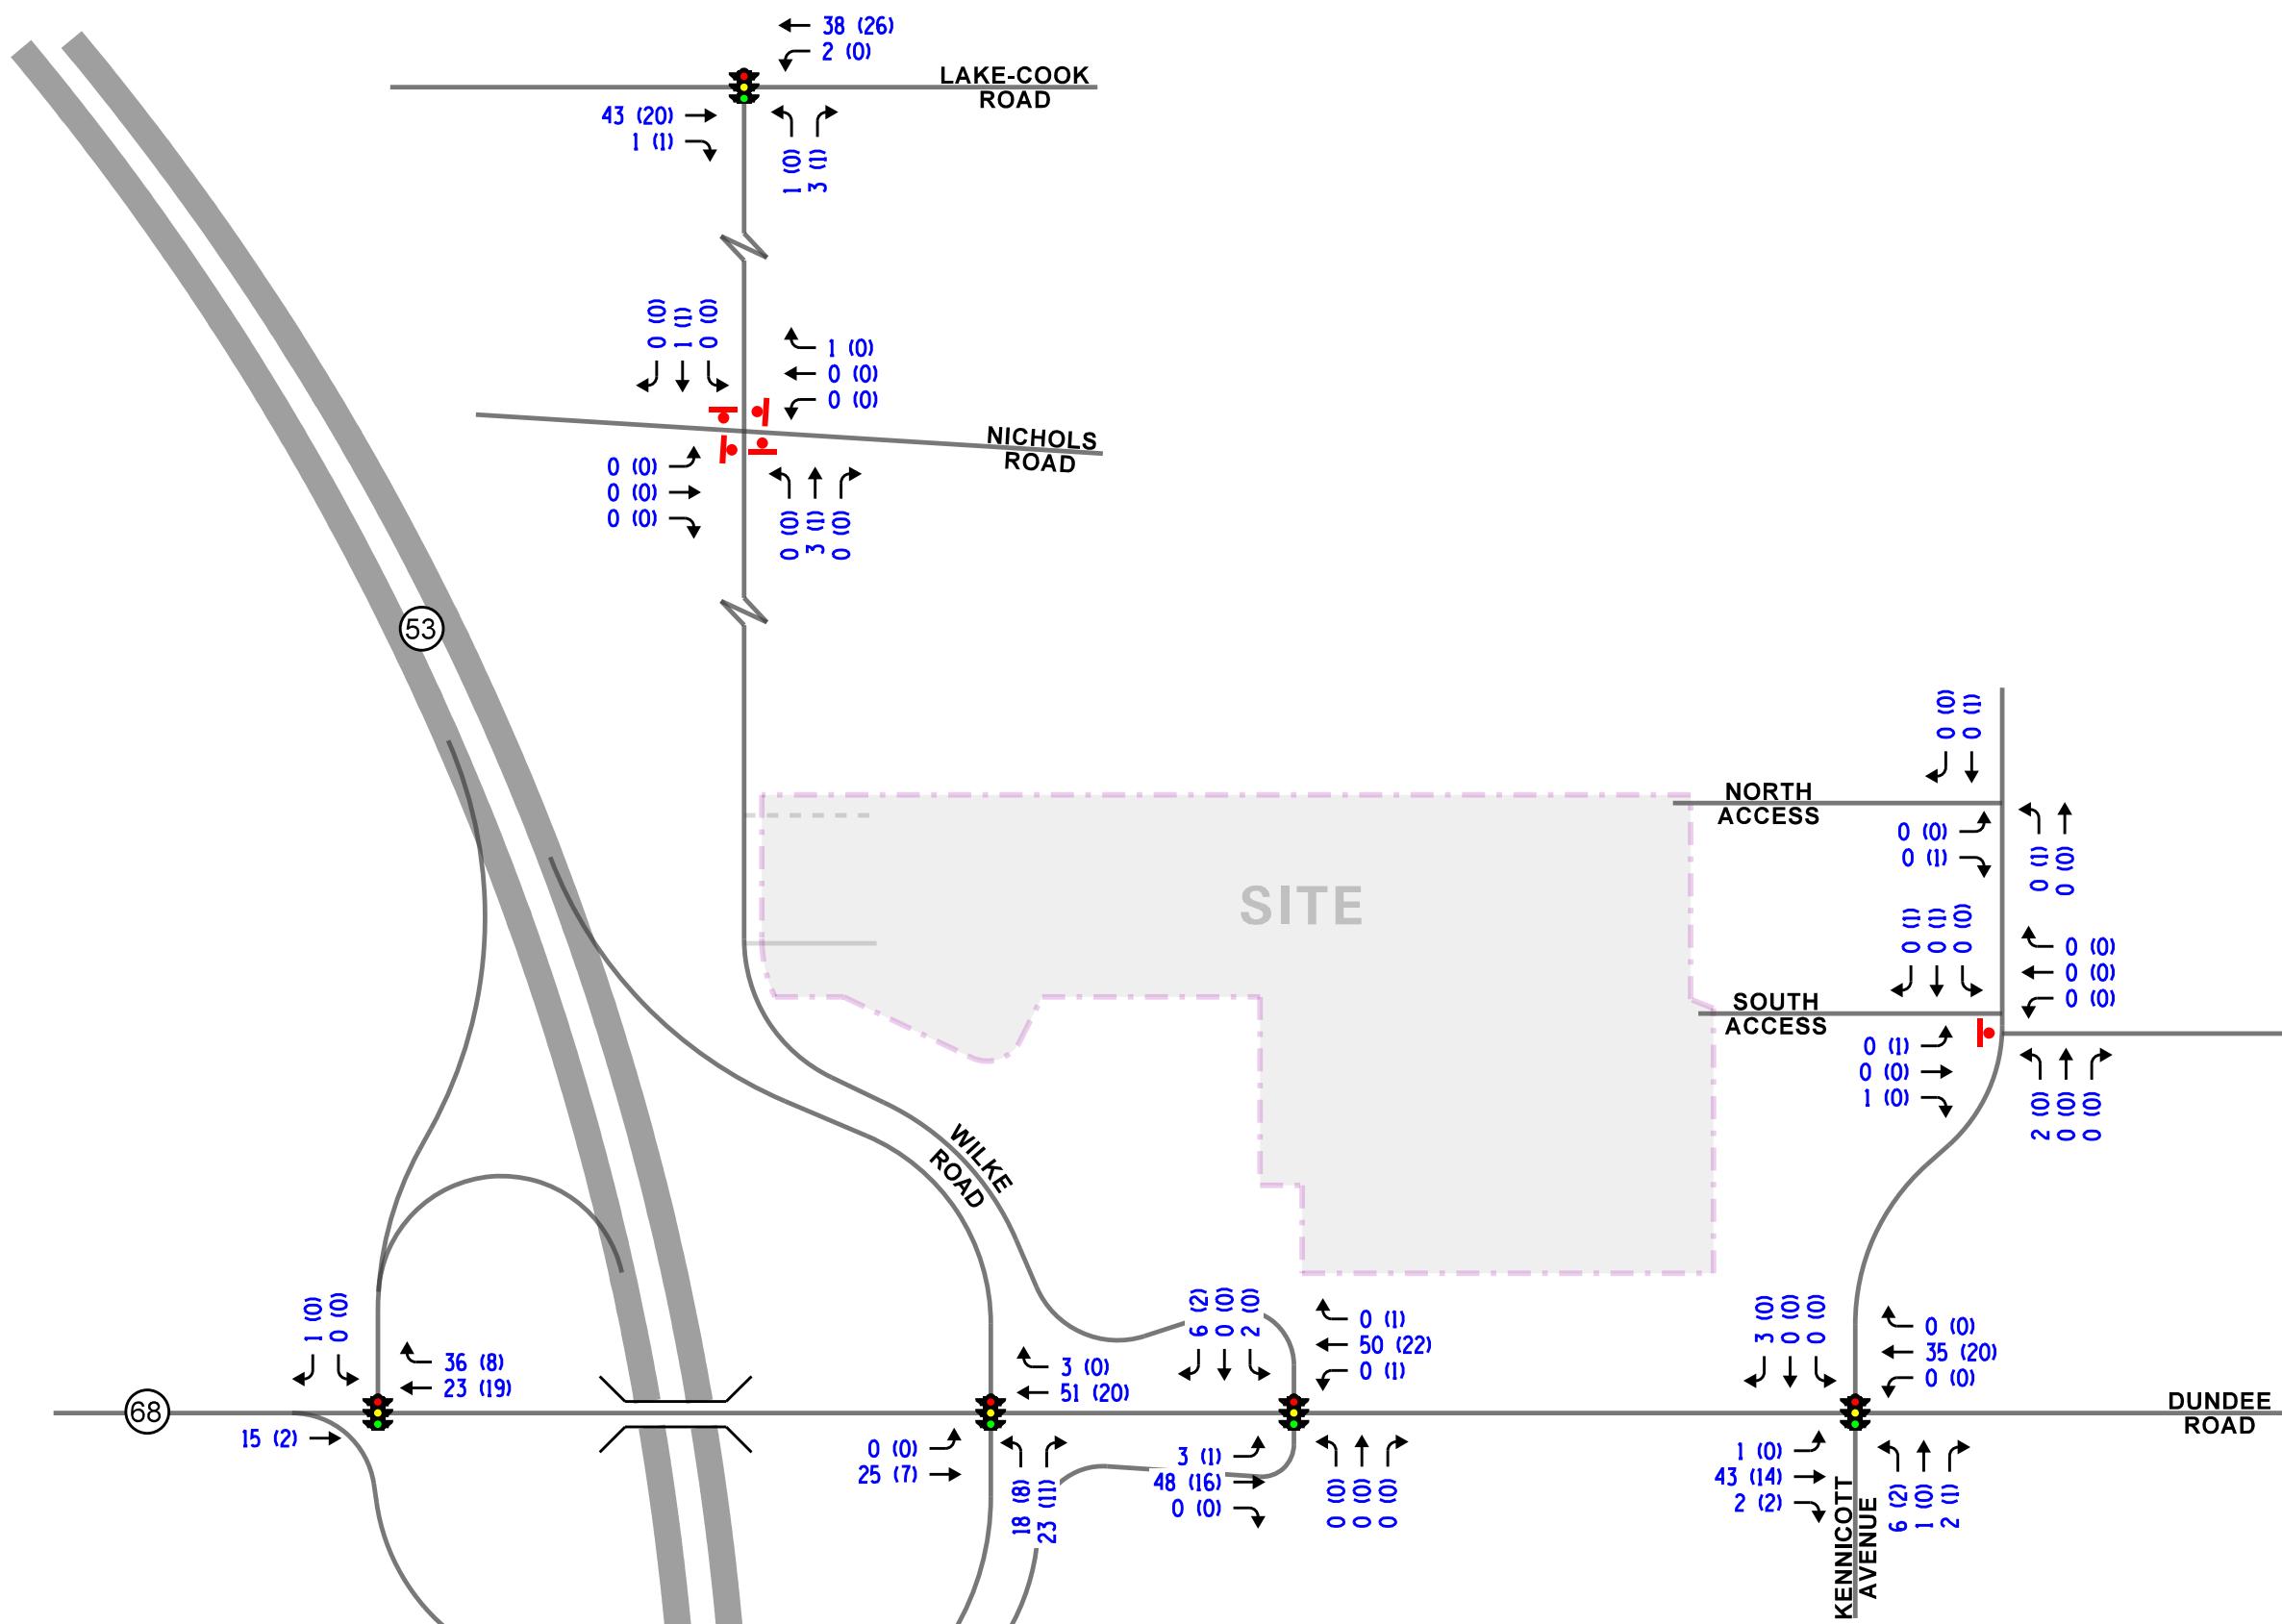

KLOA, Inc. obtained crash data¹ from IDOT for the most recent past five years available (2015 to 2019) for the study area intersections. A review of the crash data indicated that there were no accidents reported at the intersections of Kennicott Avenue with the two access drives located on the north and south side of the 3602 North Kennicott Avenue building and no fatalities reported at any of the intersections. **Tables 1** through **6** summarize the crash data.

¹ IDOT DISCLAIMER: The motor vehicle crash data referenced herein was provided by the Illinois Department of Transportation. Any conclusions drawn from analysis of the aforementioned data are the sole responsibility of the data recipient(s). Additionally, for coding years 2015 to present, the Bureau of Data Collection uses the exact latitude/longitude supplied by the investigating law enforcement agency to locate crashes. Therefore, location data may vary in previous years since data prior to 2015 was physically located by bureau personnel.

3. Traffic Characteristics of the Proposed Development

In order to properly evaluate future traffic conditions in the surrounding area, it was necessary to determine the traffic characteristics of the proposed development, including the directional distribution and volumes of traffic that it will generate.

Proposed Site and Development Plan

As proposed, the site will be developed with two warehouse/distribution buildings with a total of 511,664 square feet. The development will provide approximately 599 passenger vehicle parking spaces, approximately 65 trailer parking stalls, nine drive-in doors, and approximately 92 truck loading docks. A copy of the preliminary site plan is included in the Appendix.

Site Access

Access to the development is proposed to be provided via the following:

- A full movement access drive on Wilke Road located approximately one-third of a mile north of Dundee Road located in the approximate location of the existing full movement access drive serving the ancillary parking lot serving the Lexus of Arlington Car Dealership. This access drive will provide one inbound lane and one outbound lane, will only serve passenger vehicles, and outbound movements should be under stop sign control.
- A full movement access drive on Wilke Road that will be located approximately 2000 feet north of Dundee Road (250 feet north of the passenger vehicle access drive). This access drive will provide one inbound lane and one outbound lane, will be utilized by both passenger vehicles and truck traffic, and outbound movements should be under stop sign control. It should be noted that signage should be provided at this access drive prohibiting trucks from traveling north on Wilke Road toward Lake Cook Road.
- Access easement to the existing access roadway located on the south side of the industrial building at 3602 N. Kennicott Avenue. Under existing conditions, this access roadway provides one travel lane in each direction and is under stop-sign control at its intersection with Kennicott Avenue. Furthermore, it should be noted that eastbound movements from the access roadway on to Kennicott Avenue are restricted to right-turns only via signage and via a mountable median. This access easement will be utilized by both passenger vehicle and trucks and will be the main access off Kennicott Avenue.
- Access easement to the existing access roadway located on the north side of the industrial building at 3602 N. Kennicott Avenue, which provides one travel lane in each direction. It should be noted that given the design and location of the access drive, this access drive will be utilized as emergency access only.

A copy of the site plan is included in the Appendix.

Directional Distribution

The directions from which employees, visitors, and trucks will approach and depart the site were estimated based on existing travel patterns, as determined from the traffic counts. **Figure 6** illustrates the directional distributions of passenger vehicles and trucks to/from the proposed development.

Development-Generated Traffic Volumes

The volume of traffic generated by a development is based on the type of land uses and the size of the development. The number of peak hour and daily vehicle trips estimated to be generated by the proposed warehouse/distribution development was based on the following methodologies:

- Vehicle trip generation rates contained in *Trip Generation Manual*, 10th Edition, published by the Institute of Transportation Engineers (ITE) for Land-Use Code 150 (Warehousing)
- Per the request of Village of Arlington Heights staff, vehicle trip generation rates contained in the ITE *Trip Generation Manual*, assuming that 90 percent of the proposed building area is occupied by warehousing (Land-Use Code 150) and the remaining 10 percent of the proposed building area is occupied general office (Land-Use Code 710)
- Trip generation surveys previously conducted by KLOA, Inc. at an existing development located at 1701 Nicholas Boulevard in Elk Grove Village. This site contains a single building that is approximately 150,000 square-feet and is occupied by NNR Global Logistics.
- Trip generation surveys previously conducted by KLOA, Inc. at the existing Prologis Park 55 in Romeoville. This Park contains four buildings totaling approximately 2.6 million square-feet and consists of the following main tenants: Ryder Warehousing, Menasha Romeoville, K-C Global, LeSaint Logistics, Sandvick, and Kimberly-Clark Corporation.

It should be noted that based on data published in the ITE *Trip Generation Manual* indicates that approximately 12 percent of the weekday morning peak hour and 16 percent of the weekday evening peak hour traffic volumes are trucks. Furthermore, based on the trip generation surveys conducted, approximately 15-17 percent of the weekday morning peak hour and 4-13 percent of the weekday evening peak hour traffic volumes are trucks. However, in order to provide a conservative analysis, 20 percent of the peak hour trips were assumed to be trucks.

Table 7 through **10** shows the truck and passenger vehicle trips estimated to be generated for the proposed development during the weekday morning and weekday evening peak hours, as well as the two-way weekday daily traffic volumes based on each methodology, respectively. Copies of the ITE trip generation summary sheets and the KLOA, Inc. trip generation surveys are included in the Appendix.

As can be seen from Tables 7 through 10, the trip estimates based on the existing logistics development located in Elk Grove Village results in the most conservative trip generation and as such, the trip generation as summarized in **Table 9** was utilized for the purposes of this evaluation.

4. Projected Traffic Conditions

The total projected traffic volumes include the existing traffic volumes, increase in background traffic due to ambient growth, and the traffic estimated to be generated by the proposed subject development.

Development Traffic Assignment

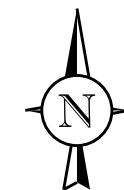

The estimated weekday morning and evening volumes that will be generated by the proposed development were assigned to the roadway system in accordance with the previously described directional distribution (Figures 6 and 7). The new passenger traffic assignment for the proposed warehouse/distribution development is illustrated in **Figure 7** and the new truck traffic assignment is illustrated in **Figure 8**.

Background Traffic Conditions

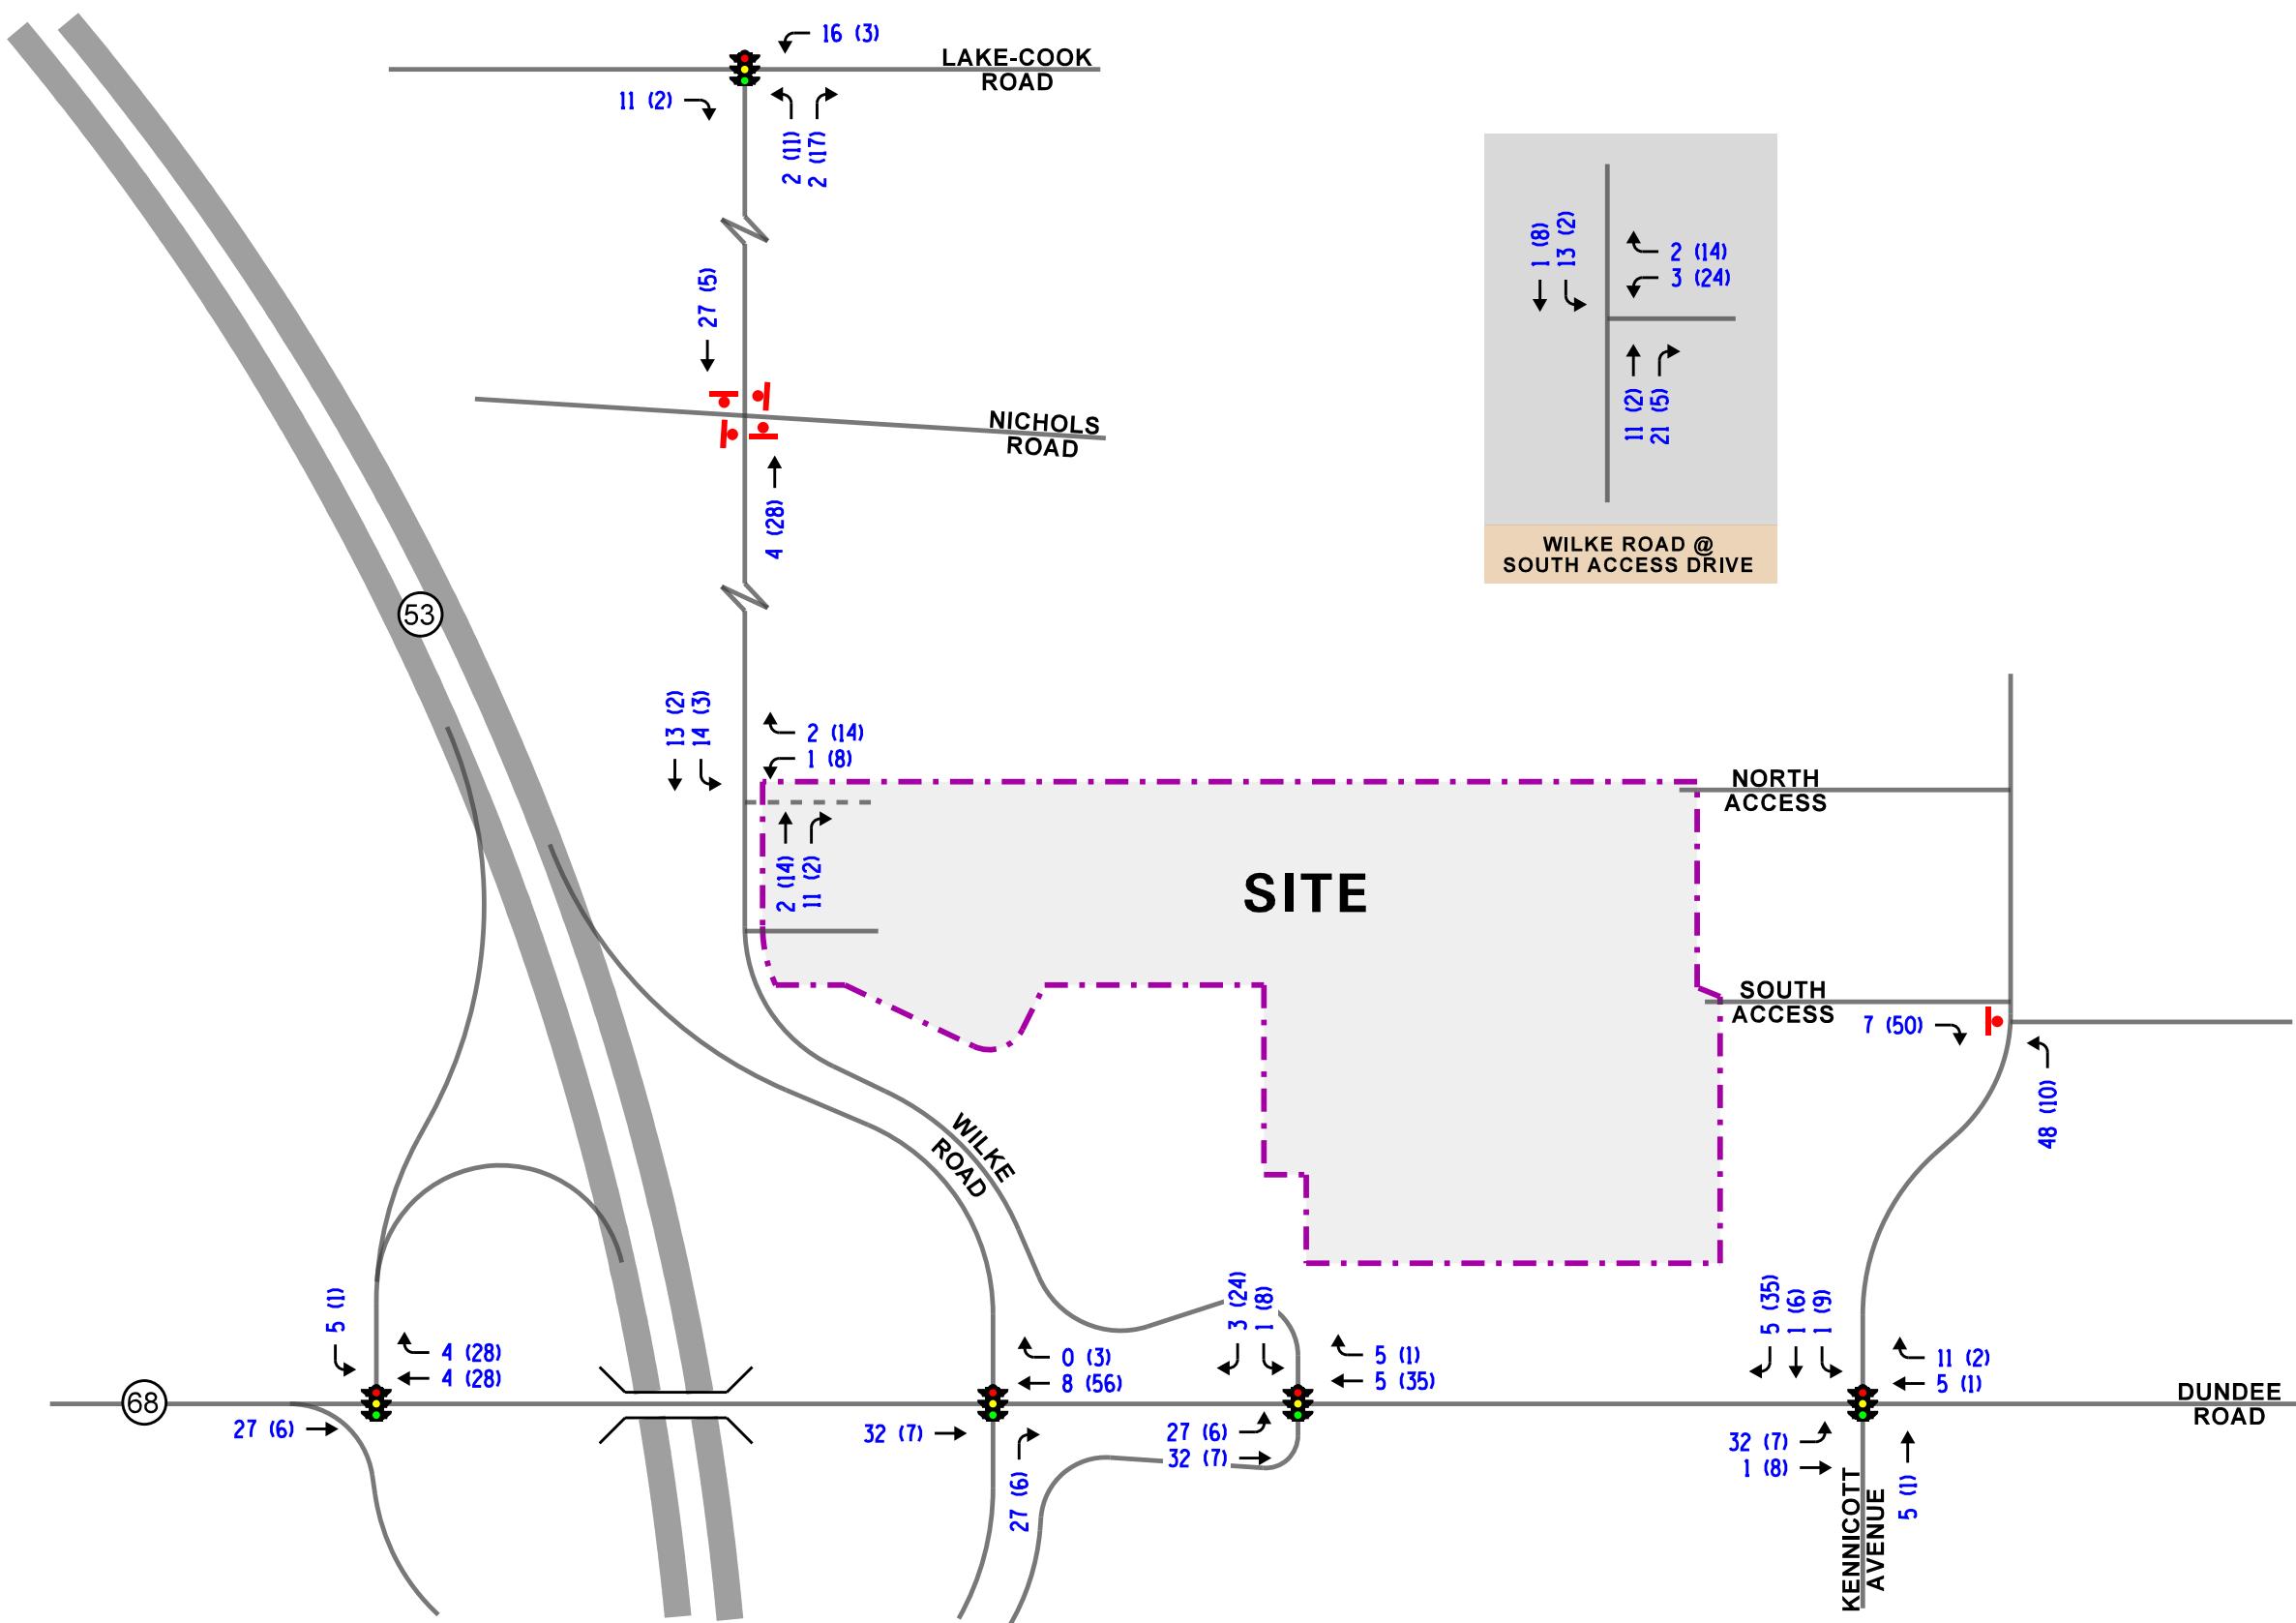

The existing traffic volumes (Figure 4) were increased by a regional growth factor to account for the increase in existing traffic related to regional growth in the area (i.e., not attributable to any particular planned development). Based on ADT projections provided by the Chicago Metropolitan Agency for Planning (CMAP) in a letter dated March 8, 2021, an increase of approximately 0.25 percent per year compounded annually is projected. As such, a total background growth of 1.5 percent (buildout year plus five years) was added to project Year 2027 conditions. **Figure 9** shows existing peak hour traffic volumes with the 1.5 percent increase in order to illustrate Year 2027 no-build conditions. A copy of the CMAP 2050 projections letter is included in the Appendix.

Total Projected Traffic Volumes

The development-generated traffic was added to the existing traffic volumes accounting for background growth to determine the Year 2027 total projected traffic volumes, as illustrated in **Figure 10**.

5. Traffic Analysis and Recommendations

The following provides an evaluation conducted for the weekday morning and weekday evening peak hours. The analysis includes conducting capacity analyses to determine how well the roadway system and access drives are projected to operate and whether any roadway improvements or modifications are required.

Traffic Analyses

Roadway and adjacent or nearby intersection analyses were performed for the weekday morning and weekday evening peak hours for the existing (Year 2021), no-build (Year 2027), and total projected (Year 2027) traffic volumes.

The traffic analyses were performed using the methodologies outlined in the Transportation Research Board's *Highway Capacity Manual (HCM), 2010* and analyzed using Synchro/SimTraffic 10 software. The analysis for the traffic-signal controlled intersections were accomplished using actual cycle lengths and phasings to determine the average overall vehicle delay and levels of service.

The analyses for the unsignalized intersections determine the average control delay to vehicles at an intersection. Control delay is the elapsed time from a vehicle joining the queue at a stop sign (includes the time required to decelerate to a stop) until its departure from the stop sign and resumption of free flow speed. The methodology analyzes each intersection approach controlled by a stop sign and considers traffic volumes on all approaches and lane characteristics.

The ability of an intersection to accommodate traffic flow is expressed in terms of level of service, which is assigned a letter from A to F based on the average control delay experienced by vehicles passing through the intersection. The *Highway Capacity Manual* definitions for levels of service and the corresponding control delay for signalized intersections and unsignalized intersections are included in the Appendix of this report.

Summaries of the traffic analysis results showing the level of service and overall intersection delay (measured in seconds) for the existing, Year 2027 no-build, and Year 2027 total projected conditions are presented in **Tables 11** through **18**. A discussion of the intersections follows. Summary sheets for the capacity analyses are included in the Appendix.

Discussion and Recommendations

The following summarizes how the intersections are projected to operate and identifies any roadway and traffic control improvements necessary to accommodate the development-generated traffic.

Dundee Road with IL Route 53 Southbound Ramps

The results of the capacity analyses indicate that overall, this intersection currently operates at level of service (LOS) A during the weekday morning and weekday evening peak hours. Under Year 2027 no-build and total projected conditions, this intersection overall is projected to continue operating at LOS A during the weekday morning and weekday evening peak hours with increases in delay of less than one second.

Furthermore, the eastbound and westbound approaches are projected to continue operating at LOS A during the peak hours and the southbound approach is projected to continue operating at LOS E during the weekday morning peak hour and at LOS D during the weekday evening peak hour with increases in delay of less than two seconds.

As such, this intersection has sufficient reserve capacity to accommodate the traffic estimated to be generated by the proposed development and no roadway improvements or signal modifications will be required.

Dundee Road with IL Route 53 Northbound Ramps

The results of the capacity analyses indicate that overall, this intersection currently operates at LOS C during the weekday morning and weekday evening peak hours. Under Year 2027 no-build and total projected conditions, this intersection is projected to continue operating at LOS C during the peak hours with increases in delay of approximately five seconds or less.

Furthermore, the eastbound and westbound approaches are projected to continue operating at LOS D or better during the peak hours with increases in delay of approximately seven seconds or less. The northbound approach is projected to continue operating at LOS D during the weekday morning peak hour and is projected to continue operating at LOS E during the weekday evening peak hour, compared to no-build conditions.

Overall, this intersection has sufficient reserve capacity to accommodate the traffic estimated to be generated by the proposed development and no roadway improvements or signal modifications will be required.

Dundee Road with Wilke Road

The results of the capacity analyses indicate that overall, this intersection currently operates at LOS B during the weekday morning peak hour and at LOS C during the weekday evening peak hour. Under Year 2027 no-build projected conditions, this intersection is projected to continue operating at LOS B during the weekday morning peak hour and at LOS C during the weekday evening peak hours with increase in delay of approximately one second.

Under Year 2027 total projected conditions, this intersection is projected to continue operating at LOS B during the weekday morning peak hour and is projected to operate at LOS D during the weekday evening peak hour with increase in delay of approximately one second and eight seconds, over no-build conditions.

Furthermore, all of the approaches are projected to continue operating at LOS D or better during the peak hours with increase in delay of 18 seconds or less, with the exception of the southbound approach which is projected to operate on the threshold of LOS D/E. It should be noted that the eastbound left-turning movement is projected to continue operating at LOS B during the weekday morning peak hour and at LOS D during the weekday evening peak hour with 95th percentile queues of 140 feet, which can be accommodated within the existing 210 feet of left-turn storage provided.

As such, this intersection has sufficient reserve capacity to accommodate the traffic estimated to be generated by the proposed development and no roadway improvements or signal modifications will be required.

Dundee Road with Kennicott Avenue

The results of the capacity analyses indicate that overall, this intersection currently operates at LOS B during the weekday morning peak hour and at LOS C during the weekday evening peak hour. Under Year 2027 no-build and total projected conditions, this intersection is projected to continue operating at LOS B during the weekday morning peak hour and at LOS C during the weekday evening peak hour with increases in delay of less than one second, and approximately three seconds, respectively.

Furthermore, all of the approaches are projected to continue operating at LOS D or better during the peak hours with increases in delay of approximately six seconds or less. The eastbound left-turning movement is projected to continue operating at LOS A during the weekday morning peak hour and at LOS E during the weekday evening peak hour with 95th percentile queues of approximately 180 feet, which is an increase of approximately one vehicle length over no-build conditions. While these queues extend beyond the approximately 150 feet of left-turn lane storage provided, these queues can be accommodated within the existing taper and striped median provided along Dundee Road.

Overall, this intersection has sufficient reserve capacity to accommodate the traffic estimated to be generated by the proposed development and no roadway improvements or signal modifications will be required.

Lake Cook Road with Wilke Road

The results of the capacity analyses indicate that overall, this intersection currently operate at LOS B during the weekday morning and weekday evening peak hours. Under Year 2027 no-build and total projected conditions, this intersection is projected to continue operating at LOS B during the peak hours with increases in delay of approximately two seconds or less.

Furthermore, the eastbound and westbound approaches are projected to continue operating at LOS C or better during the peak hours with increases in delay of approximately four seconds. The northbound approach is projected to continue operating at LOS E during the peak hours with increase in delay of approximately three seconds. However, this level of service is projected for a local roadway that has a signalized intersection with a major arterial roadway such as Lake Cook Road.

Overall, this intersection has sufficient reserve capacity to accommodate the traffic estimated to be generated by the proposed development and no roadway improvements or signal modifications will be required.

Wilke Road with Nichols Road

The results of the capacity analyses indicate that overall, this intersection and all the approaches currently operate at LOS A during the weekday morning and weekday evening peak hours. Under Year 2027 no-build and total projected conditions, this intersection and all the approaches are projected to continue operating at LOS A during the peak hours with increases in delay of less than one second. As such, this intersection has sufficient reserve capacity to accommodate the traffic estimated to be generated by the proposed development (consisting of only passenger vehicles) and no roadway improvements or signal modifications will be required.

Kennicott Avenue with Access Drives

The results of the capacity analyses indicate that outbound movements from the existing access roadway are projected to operate at LOS A during the weekday morning and weekday evening peak hours. Furthermore, northbound left-turning movements from Kennicott Avenue are projected to continue operating at LOS A during the peak hours. As such, the proposed connections to the existing access drives on Kennicott Avenue will be adequate in accommodating the traffic estimated to be generated by the proposed development and will ensure efficient and flexible access is provided.

Wilke Road with Access Drives

The results of the capacity analyses indicate that outbound movements from the proposed access drives onto Wilke Road are projected to operate at LOS B during the weekday morning and weekday evening peak hours. Furthermore, southbound left-turning movements from Wilke Road onto the proposed access drives are projected to operate at LOS A during the peak hours with 95th percentile queues of one to two vehicles. As previously indicated, truck traffic to/from the site will be restricted to/from the south toward Dundee Road. As such, all southbound left-turning movements onto the access drives will be made by passenger vehicles. Wilke Road at the proposed access drive currently provides a four-lane cross section providing two lanes in each direction. Therefore, should a vehicle be stopped waiting to turn left onto the proposed access drives, a second southbound through lane is available to bypass the stopped passenger vehicle. Overall, the proposed access drives on Wilke Road will be adequate in accommodating the traffic estimated to be generated by the proposed development, will minimize conflicts between passenger vehicles and trucks, and will ensure efficient and flexible access is provided.

Parking Evaluation

As previously indicated, the development will provide a total of approximately 599 parking spaces. Approximately 288 parking stalls (including 7 ADA spaces) will be located to the east, south and west of Building 1 and the remaining approximately 311 parking spaces (including 8 ADA spaces) will be located to the east of Building 2. Furthermore, an additional 40 land banked parking spaces will be provided along the north side of Building 2 should they be needed in the future. As such, the development will provide up to 639 parking spaces.

For the purposes of this parking evaluation, it was assumed that 10 percent of the proposed buildings will be office space and the remaining 90 percent will be warehousing space. Based on information published in the *ITE Parking Generation Manual, 5th Edition*, warehousing developments experience an average peak parking demand of 0.39 vehicles per 1,000 square feet and an 85th percentile peak parking demand of 1.11 vehicles per 1,000 square feet. Office developments experience an average peak parking demand of 2.81 vehicle per 1,000 square feet and an 85th percentile peak parking demand of 3.30 vehicles per 1,000 square feet.

With a total of 511,664 square feet of building area proposed, the development is projected to experience an average peak parking demand of 326 spaces and an 85th percentile parking demand of 680 spaces. However, it should be noted that per ITE, the 85th percentile parking demand “is not intended to recommend a policy about the level of parking that should be supplied. It is provided solely as a qualitative reference for the analyst.” As such, the proposed 599 parking spaces will be adequate in accommodating the parking estimated to be generated by the proposed development.

Dundee Road Traffic Signal Warrant Evaluation

Under the current site plan (included in the Appendix), direct access to Dundee Road is not proposed. However, should direct access be provided to Dundee Road (aligned opposite the Napleton's Arlington Heights Chrysler Dodge Jeep Ramp Dealership), a traffic signal will not be warranted at this location based on the following:

- A traffic signal at this location will not meet the IDOT minimum spacing requirement for traffic signals.
- The volume of traffic generated by the proposed development will not generate an hourly outbound traffic volume greater than 150 vehicles, which is required to meet the peak hour traffic signal warrant assuming two outbound lanes published in Chapter 4C of the Manual on Uniform Traffic Control Devices (MUTCD).

As such, should access from the subject development be proposed to Dundee Road, a traffic signal will not meet the peak hour traffic signal warrants and will unlikely be approved by IDOT given its proximity to the existing traffic signals on Dundee Road at Wilke Road and Kennicott Avenue.

6. Conclusion

A traffic impact study was conducted for the proposed warehouse/distribution development to be located on the north side of Dundee Road, approximately 1,500 feet east of IL Route 53 in Arlington Heights, Illinois. The plans call for the site to be developed with approximately 511,664 square feet of warehouse/distribution space. Access to the development is proposed via one existing access drive off Wilke Road, one proposed access drive off Wilke Road, and via two existing access drives off Kennicott Avenue. The southerly access drives on Wilke Road will serve passenger vehicles only while the northerly access drives on Wilke Road will serve both passenger vehicles and trucks. Given the layout of the site and proposed parking fields, the southerly access drive on Kennicott Avenue will be mostly utilized by both passenger vehicles and trucks. The north access drive on Kennicott Avenue will be utilized for emergency access only. Truck traffic from the development will be restricted to and from the south toward Dundee Road.

Based on the preceding analyses and recommendations, the following conclusions have been made:

- Given that Dundee Road and IL Route 53 are established truck routes serving all of the commercial land uses on both sides of Dundee Road and given the proximity of the proposed development to the IL Route 53 ramps, the majority of the truck traffic will be oriented to/from the south on IL Route 53.
- All inbound and outbound truck traffic for the proposed development will be oriented to/from the south toward Dundee Road.
- The signalized intersections within the study area have sufficient reserve capacity to accommodate the volume of traffic estimated to be generated by the proposed development.
- The proposed access system will be adequate in accommodating the site-generated traffic and will work efficiently with the adjacent access drives.
- The proposed access system will minimize the interaction between passenger vehicles and trucks and will ensure efficient and flexible access is provided for the proposed development.
- Southbound left-turns from Wilke Road onto the proposed access drives, which will only be performed by passenger vehicles, can be accommodated by the existing four lane cross section of Wilke Road.
- The proposed 599 parking spaces, and 40 proposed land banked parking spaces, will be adequate in accommodating the estimated average peak parking demand for the development.

Site Plan

SITE DIMENSIONAL AND PAVING NOTES

- ALL PROPOSED CURB AND CUTTER SHALL BE B6.12 UNLESS OTHERWISE NOTED.
- ALL DIMENSIONS ARE FACE OF CURB TO FACE OF CURB OR BUILDING FACE UNLESS OTHERWISE NOTED.
- BUILDING DIMENSIONS, GRAVITY, PARKING, AND UTILITY LAYOUT HAVE BEEN PREPARED BASED UPON ARCHITECTURAL INFORMATION. SUBSEQUENT ARCHITECTURAL CHANGES MAY EXIST AND CONTRACTOR SHALL REFER TO ARCHITECTURAL PLANS FOR ADDITIONAL INFORMATION. IN CASE OF DISCREPANCIES BETWEEN ARCHITECTURAL PLANS AND CIVIL PLANS, THE CIVIL PLANS SHALL TAKE PRECEDENCE.
- LOCATION OF PRIVATE SIDEWALKS SHALL BE COORDINATED WITH PROPOSED DOORWAYS. CONTRACTOR TO VERIFY ACTUAL BUILDING PLAN LOCATIONS WITH ARCHITECT/DEVELOPER PRIOR TO CONSTRUCTION COMMENCEMENT.
- REINFORCING TIEBARS SHALL BE USED IN ALL LOCATIONS WHERE CONCRETE ABUTS OTHER CONCRETE FEATURES (e.g. SIDEWALK ADJACENT TO FOUNDATION WALL AND SIDEWALK ADJACENT TO CURB & GUTTER). TIEBAR SIZE AND SPACING SHALL BE PER IDOT SPECIFICATIONS.
- CONTRACTOR SHALL CONSTRUCT ALL HANDICAP ACCESSIBLE ROUTES IN ACCORDANCE WITH LOCAL AND STATE ADA REQUIREMENTS.
- PAVEMENT SLOPES THROUGH HANDICAP ACCESSIBLE PARKING AREAS SHALL BE 2.00% MAXIMUM IN ANY DIRECTION.
- REFER TO CONSTRUCTION DETAILS AND GRADING ENLARGEMENTS FOR SIDEWALK RAMPS AND HANDICAP STRIPPING.
- REFER TO PHOTOMETRICS PLAN (BY OTHERS) FOR LIGHT STANDARDS AND SPECIFICATIONS.

Rosemont, IL 60018

Subject: Dundee Road -Kennicott Avenue - Lake-Cook Road
IDOT

Dear Mr. May:

In response to a request made on your behalf and dated March 8, 2021, we have developed year 2050 average daily traffic (ADT) projections for the subject location.

| ROAD SEGMENT | Current Volumes | Year 2050 ADT |
|----------------------------|-----------------|---------------|
| Dundee Rd east of IL 53 | 25,700 | 28,700 |
| Kennicott Ave, @ Dundee Rd | 4,300 | 4,800 |
| Lake Cook Rd east of IL 53 | 49,900 | 51,100 |

Traffic projections are developed using existing ADT data provided in the request letter and the results from the June 2020 CMAP Travel Demand Analysis. The regional travel model uses CMAP 2050 socioeconomic projections and assumes the implementation of the ON TO 2050 Comprehensive Regional Plan for the Northeastern Illinois area. The provision of this data in support of your request does not constitute a CMAP endorsement of the proposed development or any subsequent developments.

If you have any questions, please call me at (312) 386-8806.

Sincerely,

A handwritten signature in black ink, appearing to read "J. Rodriguez".

| Signalized Intersections | | |
|----------------------------|--|---|
| Level of Service | Interpretation | Average Control Delay (seconds per vehicle) |
| A | Favorable progression. Most vehicles arrive during the green indication and travel through the intersection without stopping. | ≤10 |
| B | Good progression, with more vehicles stopping than for Level of Service A. | >10 - 20 |
| C | Individual cycle failures (i.e., one or more queued vehicles are not able to depart as a result of insufficient capacity during the cycle) may begin to appear. Number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping. | >20 - 35 |
| D | The volume-to-capacity ratio is high and either progression is ineffective or the cycle length is too long. Many vehicles stop and individual cycle failures are noticeable. | >35 - 55 |
| E | Progression is unfavorable. The volume-to-capacity ratio is high and the cycle length is long. Individual cycle failures are frequent. | >55 - 80 |
| F | The volume-to-capacity ratio is very high, progression is very poor, and the cycle length is long. Most cycles fail to clear the queue. | >80.0 |
| Unsignalized Intersections | | |
| Level of Service | Average Total Delay (SEC/VEH) | |
| A | 0 - 10 | |
| B | > 10 - 15 | |
| C | > 15 - 25 | |
| D | > 25 - 35 | |
| E | > 35 - 50 | |
| F | > 50 | |

Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 55 (39%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.81

Intersection Signal Delay: 17.6

Intersection LOS: B

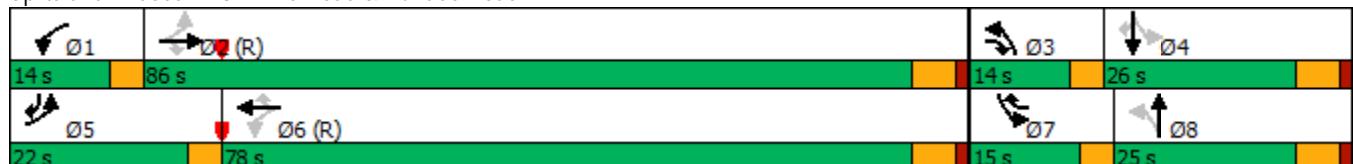

Intersection Capacity Utilization 82.2%

ICU Level of Service E

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: Wilke Road & Dundee Road

Lanes, Volumes, Timings

4: Kennicott Avenue & Dundee Road

Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 60 (43%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.80

Intersection Signal Delay: 27.0

Intersection LOS: C

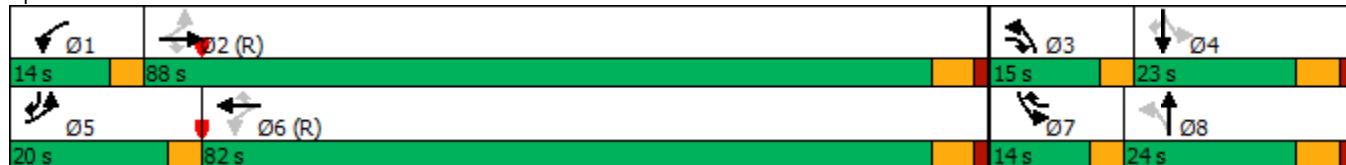

Intersection Capacity Utilization 82.4%

ICU Level of Service E

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: Wilke Road & Dundee Road

Lanes, Volumes, Timings

4: Kennicott Avenue & Dundee Road

Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 66 (47%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 95

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.90

Intersection Signal Delay: 24.8

Intersection LOS: C

Intersection Capacity Utilization 89.5%

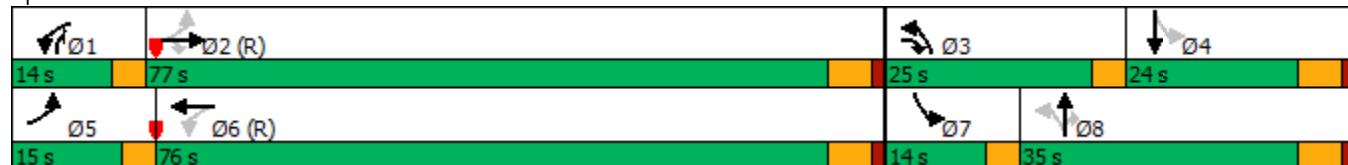

ICU Level of Service E

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 4: Kennicott Avenue & Dundee Road

Lanes, Volumes, Timings

Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 69 (49%), Referenced to phase 2:EBT and 6:WBT, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.81

Intersection Signal Delay: 33.8

Intersection LOS: C

Intersection Capacity Utilization 77.2%

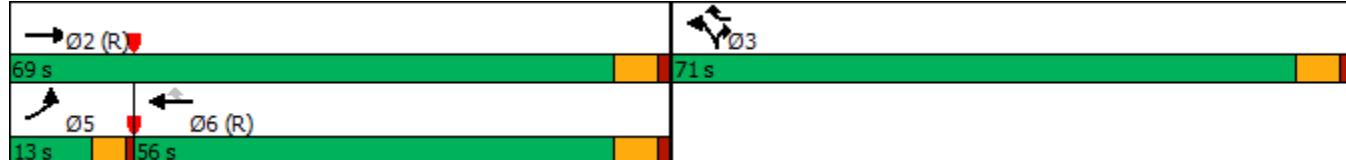

ICU Level of Service D

Analysis Period (min) 15

* User Entered Value

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 60 (43%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.82

Intersection Signal Delay: 28.4

Intersection LOS: C

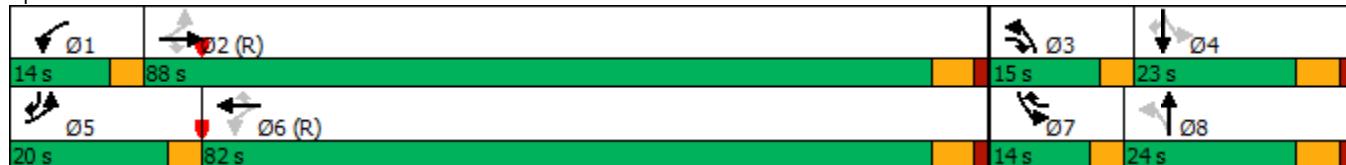

Intersection Capacity Utilization 83.3%

ICU Level of Service E

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: Wilke Road & Dundee Road

Lanes, Volumes, Timings

4: Kennicott Avenue & Dundee Road

Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 55 (39%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 100

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.83

Intersection Signal Delay: 18.3

Intersection LOS: B

Intersection Capacity Utilization 83.7%

ICU Level of Service E

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: Wilke Road & Dundee Road

Lanes, Volumes, Timings

4: Kennicott Avenue & Dundee Road

Intersection Summary

Area Type: Other

Cycle Length: 130

Actuated Cycle Length: 129.2

Natural Cycle: 90

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.93

Intersection Signal Delay: 18.1

Intersection LOS: B

Intersection Capacity Utilization 77.1%

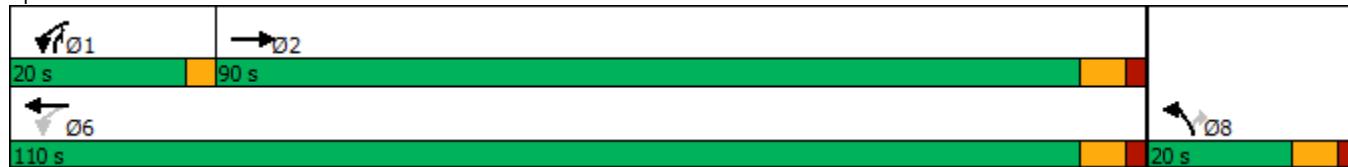

ICU Level of Service D

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 5: Wilke Road & Lake Cook Road

Intersection

Intersection Delay, s/veh 8.7

Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 66 (47%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 95

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.91

Intersection Signal Delay: 26.9

Intersection LOS: C

Intersection Capacity Utilization 92.8%

ICU Level of Service F

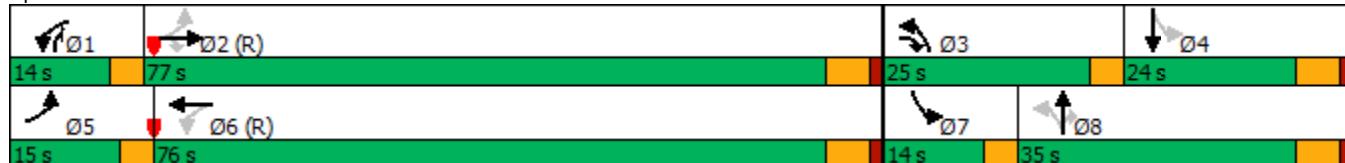

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 4: Kennicott Avenue & Dundee Road
