STORM WATER POLLUTION PREVENTION PLAN GENERAL NOTES

This Storm Water Pollution Prevention Plan has been prepared in compliance with the requirements of the Village of Arlington Heights and the State of Illinois. The work to be done is stripping, stockpiling and grading of the project site shown in detail on the contract drawings. The following notes and requirements shall apply to work performed on this project:

1. Soil Erosion and sediment control features shall be constructed prior to the commencement of upland disturbance.
2. Hauling will not be allowed when the work site is too wet to maintain acceptable conditions on adjacent streets.
3. Adjacent streets will be manually or mechanically swept periodically as may be required, minimum at end of each working day or as directed by Village Inspector. Village streets are to be kept free from mud and debris.
4. Each catch basin will be installed with a sump as indicated on the drawings. The rims will be set at final grade. A temporary 1 foot deep sump shall be excavated in a 10 foot diameter area around the structure to act as a silt trap. Both sumps will be inspected after each rain and cleaned as required.
5. Soil stockpile areas shall be designated and surrounded by a geotextile fabric silt fence to intercept sediment-laden runoff from the stockpile. The fence shall be continuously maintained and sediment shall be removed to restore planned capacity as required.
6. If the stockpiles will not be used for construction activity for a period of more than 14 days, thay shall be protected with temporary vegetative cover.
7. No material from construction site shall be discharged to the storm sewer.
8. The contractor shall take whatever other steps are deemed necessary by the Village Inspector to prevent erosion from taking place during the course of the construction project.
9. The contractor shall comply with all requirements of this plan and shall include the cost of such compliance in the total price bid for his contract.
10. All temporary and permanent erosion control measures must be maintained and repaired as needed. Erosion control features shall be inspected every 7 days or after 1/2" of rainfall. The general contractor will be responsible for inspection and repair during construction. The owner will be responsible if erosion control is required after the contractor has completed the project.
11. All work shall conform to NRCS Standards as described in the latest edition of the Illinois Urban Manual.
12. Install filter fabric erosion control material under the rim of the existing storm structures to prevent eroded material from entering the storm sewer system during the construction project. Filter fabric shall be Typar, or equal, shall extend a minimum of 12" beyond the rims in all directions, and shall be checked after each rain and replaced if covered with dirt or torn. The contractor shall use extreme care not to allow eroded material to enter the storm structure when removing or changing the filter fabric.
13. Watering shall be used as required to control dust on the project. A water truck shall be kept on the site at all times during mass earthwork construction, if required by the Village.
14. The name, address and telephone number of the individual in responsible charge of erosion control measures during the construction project shall be given to the Village Public Works Department prior to the start of construction.
15. Disturbed areas shall be protected with seeding according to the "Typical Soil Protection Chart" on this sheet.
16. All erosion control measures and inspections shall be documented on site in the site superintendent's log book.
17. A copy of the approved Storm Water Pollution Prevention Plan shall be maintained on the site at all times.
18. All wash water (concrete trucks, vehicle cleaning, equipment cleaning, etc.) shall be detained and properly treated or disposed of.
19. Rubbish, trash, garbage, litter, or other such materials shall be deposited into sealed containers. Materials shall be prevented from leaving the premises through the action of wind or stormwater discharge into drainage ditches or waters of the State.
20. All Contractors and Subcontractors involved with storm water pollution prevention shall obtain a copy of the storm water pollution prevention plan and the State of Illinois National Pollution Discharge Elimination General Permit (NPDES Permit) and become familiar with their contents.
21. The Contractor shall implement best management practices as required by the SWPPP. Additional best management practices shall be implemented as dictated by conditions at no additional cost to the owner throughtout all phases of construction.
22. Best management practices (BMP'S) and controls shall conform to federal, state, or local requirements or manual of practice. As applicable Contractor shall implement additional controls as directed by permitting agency or owner.
23. All temporary erosion and sediment control items are to be removed within thirty (30) days of the site's final stabilization by the contractor.
24. All construction activities within the boundaries of the project as well as all construction activities involved in making any connections to utilities outside the boundaries of the project shall comply with the requirements of this plan. This Storm Water Pollution Prevention Plan shall cover all such activities.
25. Refer to the Landscape Plan for locations and specifications of sodding, seeding and other permanent ground cover.

Contractor Certification Statement: "I certify under penalty of law that I understand the terms and conditions of the general National Pollutant Discharge Elimination System (NPDDES) General Permit No. ILR-10 that authorizes the storm water discharges associated with activity from the construction site identified as part of this certification."
