Arlington Heights, IL 60005

Re: **Round 1 Comments: Responses**

Plan Commission PC #15-016

Ivy Hill Elementary School
2211 N. Burke Dr.

Dear Ms. Bhide:

The following are responses to comments received on August 18 and August 19 for our Plan Commission application.

Building Department 1

6. Show Egress from Gymnasium to Public Way.

Response: Egress from the gymnasium to the public way has been shown on Sheet C-2.1.

Building Department 1A

1. Maintain Turning Radius for Emergency Equipment.

Response: An AutoTurn exhibit utilizing the Fire Engine Turning Template provided on the Village or Arlington Heights municipal website has been provided to demonstrate that the Tower Truck is capable of maneuvering through the front entrance.

Public Works Department 2

1. The existing water meter needs to be changed out to a 6" x 2" Fire Meter to cover both fire and domestic flows.

Response: A new water meter will be provided.

2. There is currently an old backflow device (4" fire). It needs to be changed to a larger size to protect the fire service and domestic service. It needs to be an RPZ.

Response: A new RPZ backflow protection device will be provided.

3. The Structure A should allow unrestricted flow into the proposed detention basin to minimize ponding in Valley.

Response: The storm structure previously labeled as Structure A has been removed due to design revisions. The new catch basin show in the previous location of structure A will now allow for unrestricted flow to the basin.

4. Structure A and Structure B should utilize a grade to screen debris, not a wire mesh.

Response: A wire mesh has been called for in order to allow water to flow to the restrictor structure if the bottom of the wire mesh becomes clogged. The use of a grate would inhibit flow in its entirety if it became clogged. We feel that the use of the wire mesh reduces the potential of the restrictor becoming clogged and failing, therefore, the detail initially submitted has not been revised.

Engineering Department 3

11. The petitioner is notified that these comments are being provided to ensure that the project meets the requirements for submittal to the Plan Commission. Approval by the Plan Commission is not an endorsement or approval of these documents to obtain the required building permits, engineering approval, or permits required by other government or permitting agencies for construction. Detailed plan review with associated comments will be provided upon submittal of plans for a building permit. The petitioner shall acknowledge that they accept this understanding.

Response: Acknowledged.

12. Final engineering plans shall be georeferenced by using State Plane Coordinate System – Illinois East. Below are details about projection:

Projected Coordinate System:	NAD_1983_StatePlane_Illinois_East_FIPS_1201_Feet
Projection:	Transverse_Mercator
False_Easting:	9842450.000000000
False_Northing:	0.00000000
Central_Meridian:	-88.33333333
Scale_Factor:	0.99997500
Latitude of Origin:	36.66666667
Linear Unit:	Foot_US
Geographic Coordinate System:	GCS_North_American_1983
Datum:	D_North_American_1983
Prime Meridian:	Greenwich
Angular Unit:	Degree

Response: Eastings and Northings for the project location have been added to the Project Benchmarks description on applicable sheets.

13. The proposed detention facility will be the responsibility of Arlington Heights School District 25 to maintain. An Onsite Utility Maintenance Agreement must be executed prior to final engineering approval. A sample document is attached. An editable Word document can be provided.

Response: A signed copy of the Onsite Utility Maintenance Agreement is enclosed.

14. Any detection storage system located under pavement must be designed to AASHTO HS-25 loading standard. The basin requires a 1-foot freeboard with an overflow weir at the 6" line. Provide calculations for sizing the weir. Revise the stormwater calculations accordingly. The proposed stormwater detention provided volume of 1.467 acre-feet will cover 83% of the total Village-required volume of the entire property. According to the report, the storage volume under existing conditions was negligible.

Response: The volume control facilities under the paved playground area do not function as detention based practices. Rather, the volume of stone functions as a retention based stormwater management practice to promote infiltration back into the ground as required by the MWRD. The retention volume is provided in the void space between stone, therefore there should be no issues with loading.

The HWL of the basin has been revised to 682.80 in order to provide 1-foot of freeboard between the HWL and proposed first floor elevation. The overland spillway has been raised to 683.3. The internal weir wall located in the outlet structure is at elevation 682.80. The volume provided is reduced from 1.497 to 1.390 (1.30 acre-feet detention +0.09 acre-feet volume control) acre-feet when the HWL is reduced to 682.80 in order to provided the 1-foot of freeboard required. The detention volume provided will account for approximately 79% of the total Village-required volume for the entire property.

Calculations demonstrating the capability of the proposed weir to pass the runoff rate produced by the property during the 100-year rainfall event have been included.

15. When on-site lighting is proposed, provide a site photometric lighting diagram indicating lighting intensities. Also provide the associated catalog cuts for all roadway, parking lot, and building mounted luminaires. All fixtures must be flat bottom, sharp cut-off, and no wall pack style fixture will be permitted.

Response: A photometric plan and luminaire cut sheets are included.

16. Provide an exhibit to engineering scale showing the turning path of the Fire Department's responding vehicle, in this case the tower truck. Exhibit must show front and rear wheel paths and the extent of the front and rear overhangs, as provided in an "Autoturn" exhibit. The vehicle shall be shown maneuvering through the site in all possible directions of travel. Attached are the specifications for the tower apparatus.

Response: An AutoTurn exhibit utilizing the Fire Engine Turning Template provided on the Village or Arlington Heights municipal website has been provided to demonstrate that the Tower Truck is capable of maneuvering through the front entrance.

17. Fire lanes adjacent to buildings must have a minimum pavement width as directed by the Fire Department to accommodate the tower truck's outriggers. Fire lanes require a heavy duty pavement section. Asphalt pavement section to consist of: 2" Surface, 2-1/4" N-50 Binder, 5" N-30 Binder, and 4" CA-6 Stone Subbase. Concrete driveway apron to be 8" thick.

Response: The Heavy-Duty pavement section initially called for on the plans has been revised as noted above.

18. Sheet C-3.1: The new sanitary service line shall be blind connected to the public sewer main. No need to replace the existing public manhole.

Response: The existing manhole has been removed from the demolition plan and called out as an existing structure. A new invert is to be cored into the existing structure at elevation 674.10.

19. Sheet C-6.1: Verify the elevations shown on the details for the outlet control structures.

Response: The elevations shown on the detail for the outlet structure have been revised.

20. Consider including bicycle racks in development plan to encourage alternate modes of transportation for employees, students, and visitors.

Response: Bike racks are provided at the school on a paved area south of the parking lot but have been temporarily relocated for a mobile classroom. These racks will return to that location after the expansion. The school will monitor the need for additional bike racks and add them as warranted.

21. The traffic report indicates that another 79 students are anticipated for the ultimate projected school enrollment, which would mostly arrive by bus. However, Table 1 shows trip generation values based upon 'both' one vehicle per child being delivered by car and also all 79 children being delivered by 2 busses. Which method or combination most accurately projects the true new number of cars that can be anticipated?

Response: School District 25 anticipates that the growth in students will occur from areas served by busing which will minimize the amount of additional traffic. Please note that some of those students still may be driven to school. To be conservative, the ITE rates were used in case the growth in students occurs from the overall school's attendance area. The projected expansion traffic volumes used in the are higher if the majority of the new students are actually bussed. Bus traffic was shown separately.

22. Provide the following in tabular format please:

a.) Please provide what the total I.T.E. trip generation based upon the number of staff, and total enrollment calculated for the existing school.
b.) Please provide what the existing real trip generation is based upon the current traffic counts.
c.) Based upon the I.T.E. trip generation rates provide the calculated number of trips that would be expected from the additional 79 students, and 1 additional staff member.
d.) Show what the actual performance of this school would be if the traffic count observed values were used to establish this school's actual trip generation rate for both existing and future build out projected values.

Response: See table below. The capacity analyses were not updated since the difference in the trip generation is only 4 vph higher in the morning and 1 vph less in the afternoon.

Trip Generation Comparison of ITE and School Traffic Volumes

		Morning Arrival			Afternoon Dismissal		
Scenario	Students	In	Out	Total	In	Out	Total
ITE Trip Generation Analysis (LUC 520 Elementary School)							
Existing	562	139	114	253	71	86	157
Expansion	79	20	15	35	10	12	22
Total	**641**	**159**	**129**	**288**	**81**	**98**	**179**
Existing School Trip Generation from Traffic Counts							
Existing	562	144	134	278	54	93	147
Expansion	79	20	19	39	8	13	21
Total	**641**	**164**	**153**	**317**	**62**	**106**	**168**
Trip Table Used in Traffic Study							
Existing (Counts)	562	144	134	278	54	93	147
Expansion (ITE)	79	20	15	35	10	12	22
Total	**641**	**164**	**149**	**313**	**64**	**105**	**169**

23. The traffic count exhibits #3 and #6 are missing the afternoon pedestrian count data at the intersection of Ivy Lane and Burke Drive.

Response: The missing data will be added (29 pedestrians).

24. Please review if any accident history has occurred along either of the streets contiguous to this school.

Response: The crash data has been requested and the analysis will be provided after it is received.

25. The Village has been through two iterations of modifying parking and traffic operations to provide signage and address congestion associated with the north parking lot drop-off and pick-up function. The observation indicated in the traffic report about the number of parents violating the no left turn sign exiting the north lot is troubling. Violation of any signs puts motorists and children at risk. In conjunction with this building revision, a definitive traffic control plan for this school must be developed. Traffic operations within the onsite parking lot, vehicles moving along the street, congestion at the Ivy and Burke intersection, operation of the bus loading lane and exit driveways, etc. must be considered.

Response: School District 25 will set up cones or other portable barriers during morning arrival and afternoon dismissal to prevent left-turning traffic during those times.

26. Are there any student safety patrols, or Adult Crossing guards being proposed for this school?

Response: Yes, adult crossing guards are provided at the intersections of Burke Drive with Ivy Lane and Valley Lane.

Fire Department 4

No comments at this time.

Health Services Department 6

No comments.

Planning & Community Development Department 7

7. The property at 2211 N. Burke Drive is zoned R-3. Elementary Schools require the approval of a special use in the R-3 district. Since there is no existing Special Use approved for the school, therefore, since the school is proposing expansion at this time, a Special Use Permit must be approved.

Response: A Special Use Permit is requested for a Public Elementary School in the R-3, One-Family Dwelling District.

That said special use is deemed necessary for the public convenience at this location.

Ivy Hill Elementary School provides education to school-age children of the surrounding neighborhood and is of benefit to the community.

That such case will not, under any circumstances of the particular case, be detrimental to the health, safety, morals or general welfare of persons residing or working in the vicinity.

The school is regularly inspected for health/life safety in accordance with Illinois State Board of Education requirements. Proposed additions will comply with current building, life safety and ADA accessibility codes.

That the proposed use will comply with the regulations and conditions specified in this ordinance for such use, and with the stipulations and conditions made a part of the authorization granted by the Village Board of Trustees.

Elementary Schools are a permitted Special Use in an R-3 Use District per Chapter 28, 5.5-1 Permitted Use Table.

8. The following variations are necessary:
a. Chapter 28, Section 11.4, Schedule of Parking Requirements from the requirement to provide 173 parking spaces to allow 72 spaces, a variation of 101 spaces.
Based on the parking data provided by the applicant, and due to this being an existing location for the school, staff supports the variation requested. Because the increase in staff is minimal (1) and the majority of additional students will be bused, Staff agrees that the parking will meet the needs of the current and projected staff and visitor parking demand.

Response: A Variation is requested from Chapter 28, Section 11.4-4, Schools, Elementary Off Street Parking, from the requirement for 173 spaces (two per each of 69 employees plus one per each of 35 classrooms) to allow 72 spaces.

The property in question cannot yield a reasonable return if permitted to be used only under the conditions allowed by the regulation zone.

Open field space is limited to the north area of the site east of the north parking lot. Adequate open field space for recreational use could not be provided with expanded asphalt parking.

The plight of the owner is due to unique circumstances.

In order to provide adequate open field and asphalt and pour-in-place playground areas on the site there is no area for expansion of the parking lots.

The variation, if granted, will not alter the essential character of the locality.

The existing parking supply of 72 spaces meets the existing and projected parking needs of the school during the day for staff and visitors without impacting on-street parking. Parking counts were conducted by Eriksson Engineering Associates, Ltd. on Wednesday, May 27, 2015, after the morning arrival period which found 55 vehicles parked on-site including staff and visitors. Just one additional staff member will be added with the addition to the school building.

9. The Village Comprehensive Plan designates the property as 'Schools' which is consistent with the use.

Response: Acknowledged.

10. The maximum allowance Floor Area Ratio is 50%. Please confirm that this requirement is met.

Response: The Floor Area Ratio requirement is met. The square foot area of the property is 291,852 square feet. Currently with Floor Area of 60,338 square feet, the Floor Area Ratio is 21%. With the proposed additional 21,921 square feet, the Floor Area Ratio would be 28%, less than 50%.

11. The maximum allowance Building Lot coverage for lots greater than 6,600 SF is 35%. Please confirm that this requirement is met.

Response: The Building Lot Coverage requirement is met. Currently with a Footprint of 51,763 square feet, the Building Lot Coverage is 18%. With the proposed additional 14,650 square foot footprint, the Building Lot Coverage would be 23%, less than 35%.

12. There is no requirement for maximum impervious surface coverage for other uses in the R-3 district.

Response: Acknowledged.

13. For the R-3 district, a maximum building height of 25 feet and 2 ½ stories is permitted. The addition has a maximum height of 23'-9" and meets the height requirement for the R-3 district.

Response: Acknowledged.

14. What is the square footage of the proposed addition? How large is the gymnasium? The plans do not appear to be 'to scale.'

Response: The area of the proposed addition, including the gymnasium is 21,921 sq. ft. The net area of the gymnasium is 5,747 sq. ft.

15. The existing north parking lot does not meet the landscape requirements of Chapter 28, Section 6.15 Landscaping {there are no landscaping islands at the end of every row and every 20 spaces and no landscape screen along Burke Road} and is considered non-conforming. No action is required at this time.

Response: No action taken.

16. The total code required parking for this site for Future Floor Plan will be calculated as:

Use	Size	Parking Ratio	Required Parking
Elementary School	35 classrooms 69 staff	Two spaces per each employee plus one space per classroom (2 x 69 + 1 x 35)	173 spaces
Total Required			173 spaces
Total Provided			72 spaces
Surplus / (Deficit)			(101 spaces)

Response: Acknowledged.

Planning & Community Development Department 7A

Tree Preservation

1. Provide two additional shade trees in order to meet the exchange rate as outlined in Chapter 28, Section 6.15-5.4. Per the exchange rate a total of 19 – 4 inch caliper replacement trees must be provided.

Response: Two additional shade trees have been added to the proposed landscape plans in order to meet the exchange rate outline in Chapter 28, Section 6.15-5.4.

2. Increase the size of the proposed shade trees to 4" caliper in order to meet the code requirement.

Response: The size of the proposed shade tree has been increased to 4".

Landscape Issues

3. The ends of all parking rows must include a landscape island, which contains a 4" caliper shade tree {Chapter 28, section 6.16-1.2b}. Provide an additional shade tree in the southwest corner at the end of the parking row.

Response: An additional shade tree has been provided at the southwest corner at the end of the parking row.

4. Per Chapter 28, section 6.15-1.2a, a three foot high screen must be provide in order to screen paved areas that are adjacent to a public way or a street or a residential district. Please provide 3' high shrubs along Valley Lane in order to screen the proposed drive aisle and the parking lot.

Response: 3' high shrubs have been provided along Valley Lane in order to screen the proposed drive aisle and parking lot.

If you have any questions, or if you need any additional information, please call our office.

Sincerely,

Don Hansen
Senior Project Manager

ONSITE UTILITY MAINTENANCE AGREEMENT

WHEREAS, Arlington Heights School District 25, an Illinois limited liability company, or its affiliates, ("RESPONSIBLE ENTITY") is the legal title holder of the following described real estate commonly referred to as Ivy Hill Elementary School at 2211 N. Burke Drive, Arlington Heights, Illinois, 60004, containing 6.727 acres, more or less, situated in the Village of Arlington Heights, Illinois and legally described as follows: (the "PROPERTY"):

THAT PART OF THE WEST HALF OF THE SOUTHEAST QUARTER, EXCEPT THE NORTH 195.00 FEET THEREOF, OF SECTION 17, TOWNSHIP 42 NORTH, RANGE 11, EAST OF THE THIRD PRINCIPAL MERIDIAN, IN COOK COUNTY, ILLINOIS, DESCRIBED AS FOLLOWS: BEGINNING AT A POINT BEING THE INTERSECTION OF THE SOUTH LINE OF THE NORTH 195.00 FEET OF THE WEST HALF OF THE SOUTHEAST QUARTER OF SAID SECTION 17 WITH THE EAST LINE OF THE SAID WEST HALF OF THE SOUTHEAST QUARTER; THENCE WESTWARD ALONG THE SAID SOUTH LINE OF THE NORTH 195.00 FEET, SOUTH 89 DEGREES, 48 MINUTES, 53 SECONDS WEST, A DISTANCE OF 535.00 FEET; THENCE SOUTH 00 DEGREES 11 MINUTES 07 SECONDS EAST, A DISTANCE OF 125.00 FEET TO A POINT OF CURVATURE; THENCE SOUTHWARD ALONG A CURVED LINE, CONVEXED TO THE WEST OF 1420.15 FEET IN RADIUS, FOR AN ARC LENGTH OF 528.35 FEET; THENCE NORTH 57 DEGREES 12 MINUTES 35 SECONDS EAST, A DISTANCE OF 24.52 FEET TO A POINT OF CURVATURE; THENCE EASTWARD ALONG A CURVED LINE, CONVEXED TO THE NORTH OF 571.24 FEET IN RADIUS, FOR AN ARC LENGTH OF 322.14 FEET TO A POINT OF TANGENCY; THENCE NORTH 89 DEGREES 31 MINUTES 14 SECONDS EAST, A DISTANCE OF 115.09 FEET TO A POINT ON THE AFORESAID EAST LINE OF THE WEST HALF OF THE SOUTHEAST QUARTER OF SECTION 17; THENCE NORTHWARD ALONG THE SAID EAST LINE OF THE WEST HALF OF THE SOUTHEAST QUARTER, NORTH 00 DEGREES 28 MINUTES 46 SECONDS WEST, A DISTANCE OF 537.42 FEET TO THE POINT OF BEGINNING, IN COOK COUNTY, ILLINOIS.

PIN Numbers: 03-17-400-006-0000

WHEREAS, Arlington Heights School District 25, desires to develop the PROPERTY; and

WHEREAS, it is necessary to service said parcel with **sanitary sewers, storm sewers and stormwater management facilities**; and

WHEREAS, the **sanitary sewers, storm sewers and stormwater management facilities** servicing the property are not located within public rights-of-way or dedicated easements; and

WHEREAS, the Village of Arlington Heights ("VILLAGE") does not maintain **sanitary sewers, storm sewers and stormwater management facilities** on privately owned property; therefore

1. It is hereby AGREED by the RESPONSIBLE ENTITY, its successors and assigns that at no expense to the VILLAGE, the RESPONSIBLE ENTITY, its successors and assigns shall:

   a. Maintain all sanitary sewers and appurtenances thereunto appertaining located upon said premises, all as shown on the Final Engineering Plans prepared by Eriksson Engineering Associates, Ltd. dated 6/6/2015, and approved by the VILLAGE, or any amended plans as agreed to and approved by both parties, copies which are on file with the Engineering Department of the VILLAGE.

   b. Maintain all storm sewers and appurtenances, including detention basins, located upon said premises.

   c. Maintain the utilities as itemized above in accordance with the latest edition of the Village of Arlington Heights Municipal Code.

   d. Maintain all private roadways, parking areas, and pavement lighting facilities located on said premises as shown on said Final Engineering Plans in accordance with the latest edition of the Village of Arlington Heights Municipal Code.

2. It is further AGREED that should the RESPONSIBLE ENTITY not properly maintain the **sanitary sewers, storm sewers and stormwater management facilities** in accordance with the requirements of the VILLAGE, written notification shall be given to the RESPONSIBLE ENTITY advising that after ten (10) days if the RESPONSIBLE ENTITY is not in compliance with the applicable requirements, the VILLAGE is hereby authorized, but not required, to enter upon the property to correct deficiencies and to place a lien against said property until such time that the VILLAGE has been fully reimbursed for its expenses in correcting these deficiencies; and

3. It is further AGREED that should the RESPONSIBLE ENTITY not properly maintain the aforementioned **sanitary sewers, storm sewers and stormwater management facilities** in accordance with the requirements of the VILLAGE, or should they allow a public nuisance to exist, written notification shall be given to the RESPONSIBLE ENTITY advising that after ten (10) days if the RESPONSIBLE ENTITY is not in compliance with the applicable requirements, the VILLAGE is hereby authorized, but not required, to enter upon the property to correct deficiencies and to place a lien against said property until such time that the VILLAGE has been fully reimbursed for its expenses in correcting these deficiencies; and

4. It is further AGREED that the RESPONSIBLE ENTITY shall save the VILLAGE harmless from any and all claims for damages resulting from the VILLAGE interrupting service to the property due to the failure of the RESPONSIBLE ENTITY to perpetually maintain the systems as described above and any other claims or damages arising out of this Agreement and the ownership of the facilities described herein.

5. This Agreement shall be binding between all successors and assigns and shall be a covenant running with the land as here and before legally described.

6. This Agreement shall be recorded in Cook County, Illinois.

This Agreement is entered into the 25 day of August, 2015.

Ivy Hill Elementary School
Addition and Renovations
July 20, 2015
Revised August 26, 2015

STORMWATER NARRATIVE

The proposed improvements at Ivy Hill Elementary School of Arlington Heights School District 25, located at 2211 N. Burke Drive include the demolition of existing concrete walks, utility services, asphalt drive and play surfaces, and the construction of a new slab-on-grade gymnasium adjacent to the east wall of the existing commons building, a new 2-story classroom addition located within the existing courtyard, and an extended bus-lane. The existing stormwater management facility will be improved in order to comply with the Village of Arlington Heights Stormwater Management Ordinance and accommodate the runoff created by the additional proposed impervious area within the project area.

EXISTING CONDITIONS

The total contiguous ownership of the parcel is 6.727 (rounded to 6.73 for calculations) acres. Approximately 5.02 acres of the site is tributary to the permitted detention facility. Under MWRD Permit No. 94-079 an existing detention facility extends along the east property line of the parcel. A berm was to be constructed around the basin up to a minimum elevation of 683.0. At a HWL of 682.7 the basin had a required detention capacity of 0.541 acre-feet and a permitted release rate of 1.79 cfs. The actual detention capacity provided was 0.542 per Permit No. 94-079.

In comparing the most recent survey of the campus and the exhibits included with the MWRD Permit No. 94-079 it is apparent that the berm proposed along the east property line was never properly constructed to the minimum proposed elevation of 683.0. The highest elevation surveyed along the berm is 682.5, which is lower than the previously permitted proposed HWL. As such, we have assumed that the detention volume provided under the existing conditions of the campus is negligible.

EXISTING FLOOD PROTECTION AREA:

A FEMA FIRM map, panel number 17031C0201J, panel 201 of 832, revised August 19, 2008 has been enclosed to identify any potential flood zones located within the project vicinity. The FIRM Map does identify a “Zone X” flood area at the extents of the existing building, which is defined as an area of 0.2% (500-Year) annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood. No proposed improvements are to occur within the “Zone X” delineation.

“Zone X” areas are not defined as Special Flood Hazard Areas, in, therefore, no special accommodation is required for the area shown on the FEMA FIRM.

EXISTING WETLAND PROTECTION AREA:

No existing wetlands are identified on the U.S. Fish and Wildlife Service National Wetlands Inventory map (see attached).

EXISTING GROUNDWATER OBSERVATION:

Based on a soil survey conducted by ECS, “the long-term ground water table is estimated to be at depths ranging from about 10 to 15 feet below existing surface grade.”

PROPOSED CONDITIONS

The construction of a new slab-on-grade gymnasium adjacent to the east wall of the existing commons building, a new 2-story classroom addition located within the existing courtyard, and an extended bus-lane will disturb approximately 2.32 acres. The majority of the proposed project falls within the area previously detained for under MWRD Permit No. 94-079. The additional detention required per the Village of Arlington Heights requirements will be determined based on the net increase in impervious area within the boundaries of the property. The existing impervious area on the property is to increase from 3.20 acre to 3.67 acres under the proposed conditions. This results in a net increase of 0.47 (3.67-3.20) acres of impervious area.

PROPOSED STORMWATER MANAGEMENT FACILITY

No record calculations for the proposed volume of the existing detention facility were included with Permit No. 94-079. As previously stated the existing detention volume provided at the site is negligible due to the past construction efforts.

Utilizing the Village allowable release rate of 0.18 cfs/acre, the total allowable release rate for the site is 1.21 cfs. The increase in impervious area will increase the storage volume required from 1.66 acre-feet to 1.77 acre-feet. An additional volume of 0.11 (1.77-1.66) acre-feet is required for the proposed improvements. The total detention provided for the site would increase from 0.542 acre-feet to 0.652 acre-feet.

However, the additional storage volume required per the MWRD based on the 2.32 acre disturbance of the project is 0.43 acre-feet. In order to satisfy both the Village and MWRD requirements the larger additional volume of 0.43 acre-feet will be required. Therefore, the total detention volume provided for the site would increase from 0.542 acre-feet to 0.972 acre-feet.

The proposed modifications to the detention basin would increase the storage volume from 0.542 acre-feet to 1.30 acre-feet of storage at a HWL of 682.80 at a maximum release rate of 1.17 cfs. The modification to the existing detention facility would provide approximately 73% (1.31/1.78) of the total required detention of the site and reduce the existing release rate of the existing detention facility from 1.79 cfs per MWRD Permit #94-079 to 1.17 cfs, which equates to a 35% reduction in release when compared to the permitted conditions.

VOLUME CONTROL:

Under the MWRD's WMO, volume control is required for the net new impervious area within the limits of the disturbance as well as any impervious area in which the drainage characteristics are altered. Volume control practices are defined as permanent practices designed to capture, retain, and infiltrate stormwater runoff from the new impervious area of development (1.02 acres) after permanent stabilization is achieved. The volume control requirement is determined by multiplying 1" of runoff over the net new impervious area within the limits of disturbance.

The total volume control required for the proposed improvements at Ivy Hill Elementary School is 0.085 (1.02 acres x 1/12 feet) acre-feet. The total volume control to be provided in stone voids beneath the

hard surface playground area and the stone trench around a perforated pipe beneath the basin bottom is approximately 0.091 acre-feet.

The volume required for the under the MWRD WMO is also allowed to be counted toward the Village detention requirements as discussed during a meeting with Mike Pagones, Deputy Director of Engineering for the Village of Arlington Heights. With the addition of the volume control, the total storage provided for the site with the addition of the volume control is 1.400 acre-feet at a release rate of 1.17 cfs at HWL 682.80. The detention provided with the addition of the volume control provides approximately 79% (1.40/1.78) of the volume required for the entire parcel.

EMERGENCY OVERFLOW:

The 100-Year Runoff Rate for the site, assuming a time of concentration of 30 minutes is 28.3 cfs. The stormwater management facility is to have two emergency overflow routes. One overflow proposed is located within the outlet control structure. The overflow is proposed to be at the HWL of 682.8. It is capable of conveying 3.76 cfs at 0.35 feet of head. The secondary overflow is located at the south end of the proposed stormwater management facility. The overflow is a 40’ broad crested weir at elevation 683.3 (6” above of the proposed HWL). This overflow weir is capable of conveying 26.31 cfs at 0.40 feet of head. The overflow weirs can convey a total of 30.07 cfs under the calculated head conditions.

Emergency Overflow Spillway Calculations

Ivy Hill Elementary School
Addition and Renovations
JC

100-year Rainfall Event

Equation used: Q = C i A (The Rational Formula)

Tributary Area =	6.72	acre
Composite Runoff Coefficient =	0.75	
Time of Concentration, Tc =	0.50	hours
100 year Rainfall Depth (Bulletin 70) =	7.58	inches
100 year Rainfall Intensity =	5.61	inches/hour

100-Year Runoff Rate = 28.3 cfs

Weir Equation: $Q = 3.03\ L\ H^{(3/2)}$ (Broad Crested Weir) **concrete**

Weir Equation: $Q = 2.60\ L\ H^{(3/2)}$ (Broad Crested Weir) **grass**

Where: L (length) = 40 ft.
H (head) = 0.40 ft.

Pond Overflow Rate
Q = 26.31 cfs

Where: L (length) = 6 ft.
H (head) = 0.35 ft.

Weier Wall Overflow Rate
Q = 3.76 cfs

Total Overflow Rate
Q = 30.07 cfs

SCOPE DOCUMENT

This drawing is one drawing within a complete set of documents and shall not be considered separately from the Drawings as a whole. The Drawings indicate the general scope of the project for the architectural design and the type of structural, mechanical and electrical systems. As Scope Documents, the Drawings do not necessarily indicate or describe all work required for full performance and completion of the requirements of the Construction Documents. On the basis of the general scope indicated or described, the Contractor shall furnish all items required for the proper execution and completion of the Work.

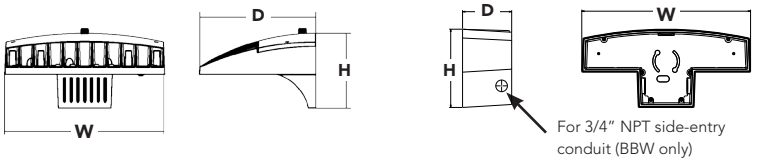
Depth:	10" *(25.4 cm)*		
Height:	6-3/8" *(16.2 cm)*		

Back Box (BBW, ELCW)

Width:	13-3/4" *(34.9 cm)*	**BBW Weight:**	5 lbs *(2.3 kg)*
Depth:	4" *(10.2 cm)*	**ELCW Weight:**	10 lbs *(4.5 kg)*
Height:	6-3/8" *(16.2 cm)*		



Introduction

The D-Series Wall luminaire is a stylish, fully integrated LED solution for building-mount applications. It features a sleek, modern design and is carefully engineered to provide long-lasting, energy-efficient lighting with a variety of optical and control options for customized performance.

With an expected service life of over 20 years of nighttime use and up to 74% in energy savings over comparable 250W metal halide luminaires, the D-Series Wall is a reliable, low-maintenance lighting solution that produces sites that are exceptionally illuminated.

NOTES

1 MVOLT driver operates on any line voltage from 120-277V (50/60 Hz). Specify 120, 208, 240 or 277 options only when ordering with fusing (SF, DF options), or photocontrol (PE option).
2 Only available with 20C, 700mA or 1000mA. Not available with PIR or PIRH.
3 Back box ships installed on fixture. Cannot be field installed. Cannot be ordered as an accessory.
4 Photocontrol (PE) requires 120, 208, 240, 277 or 347 voltage option. Not available with motion/ambient light sensors (PIR or PIRH).
5 PIR specifies the Sensor Switch SBGR-10-ODP control; PIRH specifies the Sensor Switch SBGR-6-ODP control; see Motion Sensor Guide for details. Includes ambient light sensor. Not available with "PE" option (button type photocell). Dimming driver standard. Not available with 20 LED/1000 mA configuration (DSXW1 LED 20C 1000).
6 Cold weather (-20C) rated. Not compatible with conduit entry applications. Not available with BBW mounting option. Not available with fusing. Not available with 347 or 480 voltage options. Emergency components located in back box housing. Emergency mode IES files located on product page at www.lithonia.com
7 Single fuse (SF) requires 120, 277 or 347 voltage option. Double fuse (DF) requires 208, 240 or 480 voltage option. Not available with ELCW.
8 Also available as a separate accessory; see Accessories information.
9 See the electrical section on page 3 for more details.

Accessories

Ordered and shipped separately.

DSXWHS U	House-side shield (one per light engine)
DSXWBSW U	Bird-deterrent spikes
DSXW1WG U	Wire guard accessory
DSXW1VG U	Vandal guard accessory

Performance Data

Lumen Ambient Temperature (LAT) Multipliers

Use these factors to determine relative lumen output for average ambient temperatures from 0-40°C (32-104°F).

Ambient		Lumen Multiplier
0°C	32°F	1.02
10°C	50°F	1.01
20°C	68°F	1.00
25°C	**77°F**	**1.00**
30°C	86°F	1.00
40°C	104°F	0.98

Projected LED Lumen Maintenance

Data references the extrapolated performance projections for the **DSXW1 LED 20C 1000** platform in a **25°C ambient**, based on 10,000 hours of LED testing (tested per IESNA LM-80-08 and projected per IESNA TM-21-11).

To calculate LLF, use the lumen maintenance factor that corresponds to the desired number of operating hours below. For other lumen maintenance values, contact factory.

Operating Hours	0	25,000	50,000	100,000
Lumen Maintenance Factor	1.0	0.95	0.93	0.88

Electrical Load

LEDs	Drive Current (mA)	System Watts	Current (A) 120V	208V	240V	277V	347V	480V

WG - Wire guard

VG - Vandal guard

DDL - Diffused drop lens

FEATURES & SPECIFICATIONS

INTENDED USE
The energy savings, long life and easy-to-install design of the D-Series Wall Size 1 make it the smart choice for building-mounted doorway and pathway illumination for nearly any facility.

CONSTRUCTION
Two-piece die-cast aluminum housing has integral heat sink fins to optimize thermal management through conductive and convective cooling. Modular design allows for ease of maintenance. The LED driver is mounted to the door to thermally isolate it from the light engines for low operating temperature and long life. Housing is completely sealed against moisture and environmental contaminants (IP65).

FINISH
Exterior parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures a minimum 3 mils thickness for a finish that can withstand extreme climate changes without cracking or peeling. Available in textured and non-textured finishes.

OPTICS
Precision-molded proprietary acrylic lenses provide multiple photometric distributions tailored specifically to building mounted applications. Light engines are available in 3000 K (80 min. CRI), 4000 K (70 min. CRI) or 5000 K (70 CRI) configurations.

ELECTRICAL
Light engine(s) consist of 10 high-efficacy LEDs mounted to a metal-core circuit board to maximize heat dissipation and promote long life (L88/100,000 hrs at 25°C). Class 1 electronic drivers have a power factor >90%, THD <20%, and a minimum 2.5KV surge rating. When ordering the SPD option, a separate surge protection device is installed within the luminaire which meets a minimum Category C Low (per ANSI/IEEE C62.41.2).

INSTALLATION
Included universal mounting bracket attaches securely to any 4" round or square outlet box for quick and easy installation. Luminaire has a slotted gasket wireway and attaches to the mounting bracket via corrosion-resistant screws.

LISTINGS
CSA certified to U.S. and Canadian standards. Rated for -40°C minimum ambient.

DesignLights Consortium® (DLC) qualified product. Not all versions of this product may be DLC qualified. Please check the DLC Qualified Products List at www.designlights.org to confirm which versions are qualified.

WARRANTY
Five year limited warranty. Full warranty terms located at www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx.

Note: Actual performance may differ as a result of end-user environment and application. All values are design or typical values, measured under laboratory conditions at 25°C. Specifications subject to change without notice.

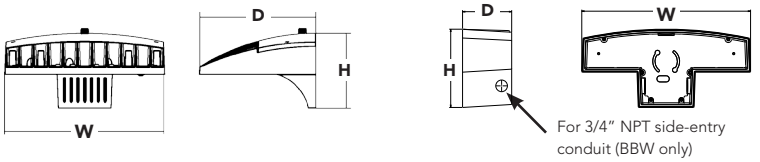
Back Box (BBW, ELCW)

Width:	13-3/4" *(34.9 cm)*	**BBW Weight:**	5 lbs *(2.3 kg)*
Depth:	4" *(10.2 cm)*	**ELCW Weight:**	10 lbs *(4.5 kg)*
Height:	6-3/8" *(16.2 cm)*		



Introduction

The D-Series Wall luminaire is a stylish, fully integrated LED solution for building-mount applications. It features a sleek, modern design and is carefully engineered to provide long-lasting, energy-efficient lighting with a variety of optical and control options for customized performance.

With an expected service life of over 20 years of nighttime use and up to 74% in energy savings over comparable 250W metal halide luminaires, the D-Series Wall is a reliable, low-maintenance lighting solution that produces sites that are exceptionally illuminated.

NOTES

1 MVOLT driver operates on any line voltage from 120-277V (50/60 Hz). Specify 120, 208, 240 or 277 options only when ordering with fusing (SF, DF options), or photocontrol (PE option).
2 Only available with 20C, 700mA or 1000mA. Not available with PIR or PIRH.
3 Back box ships installed on fixture. Cannot be field installed. Cannot be ordered as an accessory.
4 Photocontrol (PE) requires 120, 208, 240, 277 or 347 voltage option. Not available with motion/ambient light sensors (PIR or PIRH).
5 PIR specifies the Sensor Switch SBGR-10-ODP control; PIRH specifies the Sensor Switch SBGR-6-ODP control; see Motion Sensor Guide for details. Includes ambient light sensor. Not available with "PE" option (button type photocell). Dimming driver standard. Not available with 20 LED/1000 mA configuration (DSXW1 LED 20C 1000).
6 Cold weather (-20C) rated. Not compatible with conduit entry applications. Not available with BBW mounting option. Not available with fusing. Not available with 347 or 480 voltage options. Emergency components located in back box housing. Emergency mode IES files located on product page at www.lithonia.com
7 Single fuse (SF) requires 120, 277 or 347 voltage option. Double fuse (DF) requires 208, 240 or 480 voltage option. Not available with ELCW.
8 Also available as a separate accessory; see Accessories information.
9 See the electrical section on page 3 for more details.

Accessories

Ordered and shipped separately.

DSXWHS U	House-side shield (one per light engine)
DSXWBSW U	Bird-deterrent spikes
DSXW1WG U	Wire guard accessory
DSXW1VG U	Vandal guard accessory

Performance Data

Lumen Ambient Temperature (LAT) Multipliers

Use these factors to determine relative lumen output for average ambient temperatures from 0-40°C (32-104°F).

Ambient		Lumen Multiplier
0°C	32°F	1.02
10°C	50°F	1.01
20°C	68°F	1.00
25°C	**77°F**	**1.00**
30°C	86°F	1.00
40°C	104°F	0.98

Projected LED Lumen Maintenance

Data references the extrapolated performance projections for the **DSXW1 LED 20C 1000** platform in a **25°C ambient**, based on 10,000 hours of LED testing (tested per IESNA LM-80-08 and projected per IESNA TM-21-11).

To calculate LLF, use the lumen maintenance factor that corresponds to the desired number of operating hours below. For other lumen maintenance values, contact factory.

Operating Hours	0	25,000	50,000	100,000
Lumen Maintenance Factor	1.0	0.95	0.93	0.88

Electrical Load

LEDs	Drive Current (mA)	System Watts	Current (A) 120V	208V	240V	277V	347V	480V

T3M (left), ASYDF (right) lenses

HS - House-side shields

BSW - Bird-deterrent spikes

WG - Wire guard

VG - Vandal guard

DDL - Diffused drop lens

FEATURES & SPECIFICATIONS

INTENDED USE
The energy savings, long life and easy-to-install design of the D-Series Wall Size 1 make it the smart choice for building-mounted doorway and pathway illumination for nearly any facility.

CONSTRUCTION
Two-piece die-cast aluminum housing has integral heat sink fins to optimize thermal management through conductive and convective cooling. Modular design allows for ease of maintenance. The LED driver is mounted to the door to thermally isolate it from the light engines for low operating temperature and long life. Housing is completely sealed against moisture and environmental contaminants (IP65).

FINISH
Exterior parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures a minimum 3 mils thickness for a finish that can withstand extreme climate changes without cracking or peeling. Available in textured and non-textured finishes.

OPTICS
Precision-molded proprietary acrylic lenses provide multiple photometric distributions tailored specifically to building mounted applications. Light engines are available in 3000 K (80 min. CRI), 4000 K (70 min. CRI) or 5000 K (70 CRI) configurations.

ELECTRICAL
Light engine(s) consist of 10 high-efficacy LEDs mounted to a metal-core circuit board to maximize heat dissipation and promote long life (L88/100,000 hrs at 25°C). Class 1 electronic drivers have a power factor >90%, THD <20%, and a minimum 2.5KV surge rating. When ordering the SPD option, a separate surge protection device is installed within the luminaire which meets a minimum Category C Low (per ANSI/IEEE C62.41.2).

INSTALLATION
Included universal mounting bracket attaches securely to any 4" round or square outlet box for quick and easy installation. Luminaire has a slotted gasket wireway and attaches to the mounting bracket via corrosion-resistant screws.

LISTINGS
CSA certified to U.S. and Canadian standards. Rated for -40°C minimum ambient.

DesignLights Consortium® (DLC) qualified product. Not all versions of this product may be DLC qualified. Please check the DLC Qualified Products List at www.designlights.org to confirm which versions are qualified.

FEATURES

OPTICAL SYSTEM
- Self-flanged semi-specular, matte-diffuse or specular finishing trim
- Patented Bounding Ray™ optical design (U.S. Patent No. 5,800,050)
- 45° cutoff to source and source image
- Top-down flash characteristic
- Polycarbonate lens integral to light engine

MECHANICAL SYSTEM
- 16-gauge galvanized steel construction; maximum 1-1/2" ceiling thickness
- Telescopic mounting bars maximum of 32" and minimum of 15", preinstalled, 4" vertical adjustment
- Toolless adjustments post installation
- Junction box capacity: 8 (4 in, 4 out) 12AWG rated for 90°C
- Light engine and driver accessible through aperture

ELECTRICAL SYSTEM
- Fully serviceable and upgradeable lensed LED light engine
- 70% lumen maintenance at 60,000 hours
- Tested according to LM-79 and LM-80 standards
- Overload and short circuit protected
- 2.5 SDCM; 85 CRI typical, 90+ CRI optional

LISTINGS
- Fixtures are CSA certified to meet US and Canadian standards; wet location, covered ceiling

WARRANTY
- 5-year limited warranty. Complete warranty terms located at: www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx

Note: Actual performance may differ as a result of end user environment and application. All values are design or typical values, measured under laboratory conditions at 25 °C.

ACCESSORIES

ACCESSORIES order as separate catalog numbers (shipped separately)

SCA8	Sloped ceiling adapter. Degree of slope must be specified (5D, 10D, 15D, 20D, 25D, 30D). Ex: SCA8 10D. Refer to TECH-190.
CTA4-8 YK	Ceiling thickness adapter (extends mounting frame to accommodate ceiling thickness up to 5"). Adds 1" to fixture height.
GVRT	Vandal-resistant trim accessory. Refer to TECH-200.
ISD BC	0-10V wallbox dimmer. Refer to ISD-BC.

NOTES

ORDERING NOTES

1. Not available with finishes.
2. Not available with EL or ELR options.
3. Refer to TECH-240 for compatible dimmers.
4. Not available with nLight® and XPoint options.
5. 120V only.
6. Specify 120V or 277V.
7. Not available with white reflector.
8. Not available with black reflector
9. For dimensional changes, refer to TECH-140. Not available with 347V.
10. For use with generator supply EM power. Will require an emergency hot feed and normal hot feed.
11. Available only with EL/ELR. Not available with CP. PSSD2 included. Refer to PSSD2.

*Application diagram applies for fixtures with eldoLED drivers only.

nPS 80 EZ Dimming/Control Pack (qty 2 required)
nPODM 2P DX Dual On/Off/Dim Push-Button WallPod
nCM ADCX Daylight Sensor with Automatic Dimming Control
nCM PDT 9 Dual Technology Occupancy Sensor

Description: This design provides a dual on/off/dim wall station that enables manual control of the fixtures in Row A and Row B separately. Additionally, a daylight harvesting sensor is provided so the lights in row B can be configured to dim automatically when daylight is available. An occupancy sensor turns off all lights when the space is vacant.

nLight® Control Accessories:
Order as separate catalog number. Visit www.sensorswitch.com/nLight for complete listing of nLight controls.

MILLENIUM™ SQUARE

MS11 SERIES – LOW PROFILE HOUSING

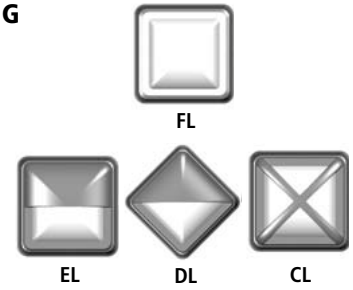
PRODUCT FEATURES:

» Surface mount – ceiling (FL & CL only) or wall mount;
12"W×12"W×4"D (CL, EL, FL)
15"W×15"W×4"D (DL)

» Peace of Mind Guarantee®

» Dust and water protected to IP64 standards

» ADA compliant



SPECIFICATIONS

BASEPLATE: Marine grade die-cast aluminum. Integral heat sinks. Baseplate flange interlocks and wraps around lens base producing maximum moisture deflection and resistance to prying. Baseplate provided with four-point mounting holes and one wireway hole. Standard black, bronze or white exterior TGIC polyester powder coat – 5-step pre-treatment. See Ordering Information for optional finishes.

REFLECTOR: Full reflector/wire cover – 92% reflectivity.

LENS: UV-stabilized, high impact resistant, virgin injection molded polycarbonate. High efficiency blondel fluted lens obscures lamp image and maximizes uniformity. Lens secured with four concealed captive Torx® with center pin fasteners. Exclusive water channeling lens design provides 360° ingress protection.

LENS BASE/GRILLE: Lens base shields lamp from viewing angles. High impact resistant, injection molded opaque black, bronze or white polycarbonate. Optional Light Gray, Silver, Forest Green or Custom Color (see Ordering Information below) are chemically bonded, impact resistant finishes.

ELECTRICAL: Fluorescent magnetic ballasts power factor corrected. Fluorescent electronic 120/277/347 and dual voltage ballasts high power factor (<10% THD). LED: Replaceable high-brightness ANSI 3500K (80 CRI min.), 4000K (70 CRI min.), or 5000K (70 CRI min.) white LED array. 120-277VAC, high power factor electronic driver. See options for higher CRI lamp availability.

GASKETING: Die-cut, closed cell EPDM self adhesive gasket seals baseplate to mounting surface. Closed cell, silicone "O" ring gaskets positioned and friction secured in gasket channels of lens base, baseplate and optional surface adapter.

HARDWARE: Four stainless steel Torx® fasteners.

WARRANTY: Standard four-point mounting and polycarbonate lens required for Peace of Mind Guarantee®. One (1) year warranty against defects in materials and workmanship. Five (5) year warranty on LED lamps and driver for defects resulting in a fixture lumen depreciation of 30% or greater.

LISTINGS: Luminaire is certified to UL Standards by either Underwriters Laboratory or Intertek Testing Laboratory for Wet Location (listing includes Emergency Battery Pack "EL" option). UL certified IP64 per IEC 60598. ADA Compliant. All Kenall SSL Luminaires are tested to the IESNA LM-79-08 standard requiring spectroradiometric measurements for CRI and CCT as well as goniophotometric measurements for lighting distributions and total luminous flux.

CONTOUR SERIES

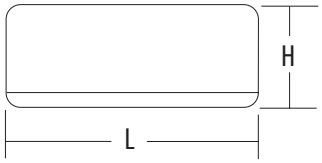
Specifications

Length: 17-1/2" *(44.5 cm)*

Width: 17-1/2" *(44.5 cm)*

Height: 7-1/8" *(18.1 cm)*

Weight (max): 36 lbs. *(16.4 kg)*



Introduction

The Contour® Series luminaires offer traditional square dayforms with softened edges for a versatile look that complements many applications.

The KACM LED combines the latest in LED technology with the familiar aesthetic of the Contour® Series for stylish, high-performance illumination that lasts. It is ideal for replacing 100-400W metal halide in surface/canopy lighting applications with typical energy savings of 65% and expected service life of over 100,000 hours.

- BL50 Bi-level switched dimming, 50%[5,6]
- HS Houseside shield

Shipped separately [3]

- WG Wire guard

Finish *(required)*

- DDBXD Dark bronze
- DBLXD Black
- DNAXD Natural aluminum
- DWHXD White
- DDBTXD Textured dark bronze
- DBLBXD Textured black
- DNATXD Textured natural aluminum
- DWHGXD Textured white

Accessories

Ordered and shipped separately.

- KACMYK DDBXD U Yoke/trunnion accessory (specify finish)
- KACWG U Wire guard accessory

NOTES

1. 30C not available with 530mA and 347V or 480V.
2. MVOLT driver operates on any line voltage from 120-277V (50/60 Hz). Single fuse (SF) requires 120, 277 or 347 voltage option. Double fuse (DF) requires 208, 240 or 480 voltage option.
3. Also available as a separate accessory; see Accessories information at left.
4. PIR & PIR3FC3V specifies the Acuity Controls SBGR 10 ODP motion/ambient sensor, the PIRH & PIRH3FC3V specifies the Acuity Controls SBGR 6 ODP motion/ambient sensor.
5. Requires an additional switched circuit.
6. Dimming driver standard. MVOLT only.

Performance Data

Lumen Output

Lumen values are from photometric tests performed in accordance with IESNA LM-79-08. Data is considered to be representative of the configurations shown, within the tolerances allowed by Lighting Facts. Contact factory for performance data on any configurations not shown here.

Performance Data

Lumen Ambient Temperature (LAT) Multipliers

Use these factors to determine relative lumen output for average ambient temperatures from 0-40°C (32-122°F).

Ambient		Lumen Multiplier
0°C	32°F	1.02
10°C	50°F	1.01
20°C	68°F	1.00
25°C	**77°F**	**1.00**
30°C	86°F	1.00
40°C	104°F	0.99

Projected LED Lumen Maintenance

Data references the extrapolated performance projections for the **KACM LED 60C** platform in a **25°C ambient**, based on 10,000 hours of LED testing (tested per IESNA LM-80-08 and projected per IESNA TM-21-11).

To calculate LLF, use the lumen maintenance factor that corresponds to the desired number of operating hours below. For other lumen maintenance values, contact factory.

Operating Hours	0	25,000	50,000	100,000
Lumen Maintenance Factor	1.0	0.94	0.91	0.84

Electrical Load

Number of LEDs	Drive Current (mA)	System Watts	Current (A) 120V	208V	240V	277V	347V	480V

FEATURES & SPECIFICATIONS

INTENDED USE
The energy savings and long life of the KACM LED surface-mount luminaire make it a reliable choice for illuminating parking garages, convenience stores, hotels, and canopy walkways.

CONSTRUCTION
Single-piece die-cast, aluminum housing with contoured edges has a 0.12" nominal wall thickness. Die-cast door frame has an impact-resistant, tempered glass lens that is fully gasketed with one-piece tubular silicone.

FINISH
Exterior parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures a minimum 3 mils thickness for a finish that can withstand extreme climate changes without cracking or peeling.

OPTICS
Precision-molded refractive acrylic lenses housed behind the door frame lens are available in 5 distributions. Light engines are available in 3000K (70 CRI min.), 4000K (70 CRI min.), 5000K (70 CRI min.) configurations.

ELECTRICAL
Light eengines consist of 20, 34, 40, or 60 high efficacy LEDs mounted to a metal-core circuit board and aluminum heat sink, ensuring optimal thermal management and long life. Class 1 electronic driver has a power factor >90%, THD <20%, and has an expected life of over 100,000 hours with <1% failure rate. Internal 10kV surge protection meets a minimum Category C low operation per ANSI/IEEE C62.41.2).

INSTALLATION
Standard configuration utilizes four 1/2 " mounting holes and one 7/8" electrical connection hole located on top for surface mounting (hardware included). Mount on concrete, steel, or aluminum only. Mount on covered ceilings only. Not for use in dwellings. Also available with a through-wire condulet (conduit/outlet) tee option or a yoke/trunnion mount option.

LISTINGS
CSA certified to U.S. and Canadian standards. Luminaire is rated IP65 for outdoor applications. Rated for -40°C minimum ambient conditions. DesignLights Consortium® (DLC) qualified product. Not all versions of this product may be DLC qualified. Please check the DLC Qualified Products List at www.designlights.org to confirm which versions are qualified.

WARRANTY
Five year limited warranty. Full warranty terms located at www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx.

NOTE: Actual performance may differ as a result of end-user environment and application. All values are design or typical values, measured under laboratory conditions at 25°C. Specifications subject to change without notice.

D-Series Size 1
LED Area Luminaire

Catalog Number	**DSX1 LED 60C 1000 50K TFTM MVOLT SPA PIRH**
Notes	
Type	**W1**

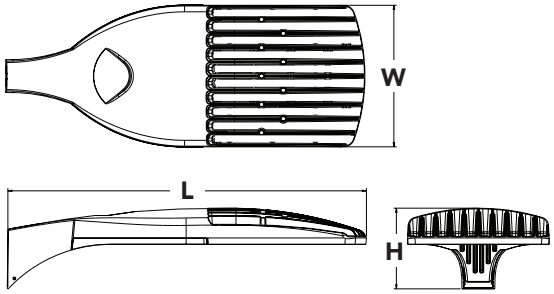
Specifications

EPA:	1.2 ft² (0.11 m²)
Length:	33" (83.8 cm)
Width:	13" (33.0 cm)
Height:	7-1/2" (19.0 cm)
Weight (max):	27 lbs (12.2 kg)



Introduction

The modern styling of the D-Series is striking yet unobtrusive - making a bold, progressive statement even as it blends seamlessly with its environment.

The D-Series distills the benefits of the latest in LED technology into a high performance, high efficacy, long-life luminaire. The outstanding photometric performance results in sites with excellent uniformity, greater pole spacing and lower power density. It is ideal for replacing 100 – 400W metal halide in pedestrian and area lighting applications with typical energy savings of 65% and expected service life of over 100,000 hours.

PIRH

Control options

Shipped installed

PER	NEMA twist-lock receptacle only (no controls) [7]
PER5	Five-wire receptacle only (no controls) [7,8]
PER7	Seven-wire receptacle only (no controls) [7,8]
DMG	0-10V dimming driver (no controls) [9]
DCR	Dimmable and controllable via ROAM® (no controls) [10]
DS	Dual switching [11,12]
PIR	Motion sensor, 8-15' mounting height [13]
PIRH	Motion sensor, 15-30' mounting height [13]
BL30	Bi-level switched dimming, 30% [12,14]
BL50	Bi-level switched dimming, 50% [12,14]
PNMTDD3	Part night, dim till dawn [15]
PNMT5D3	Part night, dim 5 hrs [15]
PNMT6D3	Part night, dim 6 hrs [15]
PNMT7D3	Part night, dim 7 hrs [15]

Other options

Shipped installed

HS	House-side shield [16]
WTB	Utility terminal block [17]
SF	Single fuse (120, 277, 347V) [18]
DF	Double fuse (208, 240, 480V) [18]
L90	Left rotated optics [19]
R90	Right rotated optics [19]

Finish *(required)*

DDBXD	Dark bronze
DBLXD	Black
DNAXD	Natural aluminum
DWHXD	White
DDBTXD	Textured dark bronze
DBLBXD	Textured black
DNATXD	Textured natural aluminum
DWHGXD	Textured white

Accessories

Ordered and shipped separately.

Controls & Shields

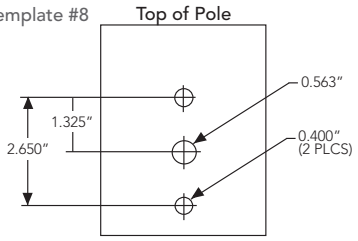
DLL127F 1.5 JU	Photocell - SSL twist-lock (120-277V) [20]
DLL347F 1.5 CUL JU	Photocell - SSL twist-lock (347V) [20]
DLL480F 1.5 CUL JU	Photocell - SSL twist-lock (480V) [20]
SC U	Shorting cap [20]
DSX1HS 30C U	House-side shield for 30 LED unit
DSX1HS 40C U	House-side shield for 40 LED unit
DSX1HS 60C U	House-side shield for 60 LED unit
PUMBA DDBXD U*	Square and round pole universal mounting bracket (specify finish)
KMA8 DDBXD U	Mast arm mounting bracket adaptor (specify finish) [6]

For more control options, visit DTL and ROAM online.

NOTES
1. Rotated optics available with 60C only.
2. AMBPC only available with 530mA or 700mA.
3. MVOLT driver operates on any line voltage from 120-277V (50/60 Hz). Specify 120V, 208V, 240V or 277V options only when ordering with fusing (SF, DF options).
4. Not available with single board, 530mA product (30C 530 or 60C 530 DS). Not available with BL30, BL50 or PNMT options.
5. Available as a separate combination accessory: PUMBA (finish) U; 1.5 G vibration load rating per ANCI C136.31.
6. Must be ordered as a separate accessory; see Accessories information. For use with 2-3/8" mast arm (not included).
7. Photocell ordered and shipped as a separate line item from Acuity Brands Controls. See accessories. Not available with DS option.
8. If ROAM® node required, it must be ordered and shipped as a separate line item from Acuity Brands Controls. Not available with DCR.
9. DMG option for 347V or 480V requires 1000mA.
10. Specifies a ROAM® enabled luminaire with 0-10V dimming capability; PER option required. Additional hardware and services required for ROAM® deployment; must be purchased separately. Call 1-800-442-6745 or email: sales@roamservices.net. N/A with DS, PIR, PIRH, PER5, PER7, BL30, BL50 or PNMT options.
11. Requires 40C or 60C. Provides 50/50 luminaire operation via two independent drivers on two separate circuits. N/A with PER, DCR, WTB, PIR or PIRH.
12. Requires an additional switched circuit.
13. PIR specifies the SensorSwitch SBGR-10-ODP control; PIRH specifies the SensorSwitch SBGR-6-ODP control; see Motion Sensor Guide for details. Dimming driver standard. Not available with DS, PER5 or PER7.
14. Dimming driver standard. MVOLT only. Not available with 347V, 480V, DCR, DS, PER5, PER7 or PNMT options.
15. Dimming driver standard. MVOLT only. Not available with 347V, 480V, DCR, DS, PER5, PER7, BL30 or BL50.
16. Also available as a separate accessory; see Accessories information.
17. WTB not available with DS.
18. Single fuse (SF) requires 120V, 277V or 347V. Double fuse (DF) requires 208V, 240V or 480V.
19. Available with 60 LEDs (60C option) only.
20. Requires luminaire to be specified with PER option. Ordered and shipped as a separate line item from Acuity Brands Controls.

Drilling

Template #8



DSX1 shares a unique drilling pattern with the AERIS™ family. Specify this drilling pattern when specifying poles, per the table below.

DM19AS	Single unit	**DM29AS**	2 at 90° *
DM28AS	2 at 180°	**DM39AS**	3 at 90° *
DM49AS	4 at 90° *	**DM32AS**	3 at 120° **

Example: SSA 20 4C **DM19AS** DDBXD

Visit Lithonia Lighting's POLES CENTRAL to see our wide selection of poles, accessories and educational tools.
**Round pole top must be 3.25" O.D. minimum.*
***For round pole mounting (RPA) only.*

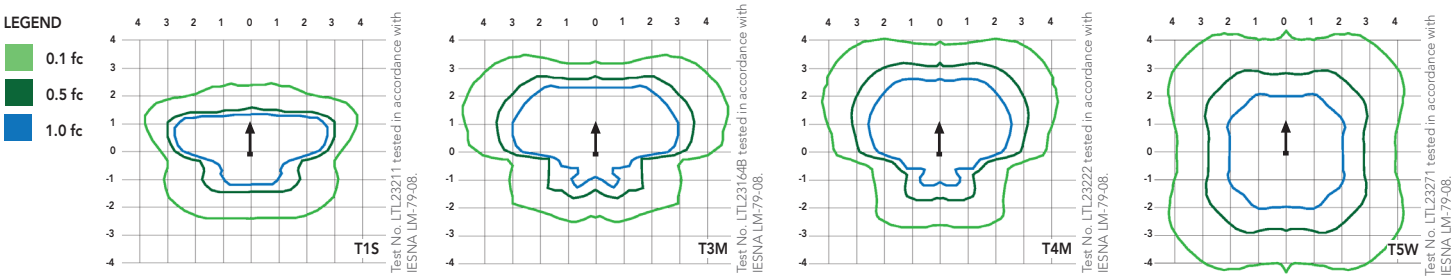
Tenon Mounting Slipfitter **

Tenon O.D.	Single Unit	2 at 180°	2 at 90°	3 at 120°	3 at 90°	4 at 90°
2-3/8"	AST20-190	AST20-280	AST20-290	AST20-320	AST20-390	AST20-490
2-7/8"	AST25-190	AST25-280	AST25-290	AST25-320	AST25-390	AST25-490
4"	AST35-190	AST35-280	AST35-290	AST35-320	AST35-390	AST35-490

Photometric Diagrams

To see complete photometric reports or download .ies files for this product, visit Lithonia Lighting's D-Series Area Size 1 homepage.

Isofootcandle plots for the DSX1 LED 60C 1000 40K. Distances are in units of mounting height (20').



Performance Data

Lumen Ambient Temperature (LAT) Multipliers

Use these factors to determine relative lumen output for average ambient temperatures from 0-40°C (32-104°F).

Ambient		Lumen Multiplier
0°C	32°F	1.02
10°C	50°F	1.01
20°C	68°F	1.00
25°C	**77°F**	**1.00**
30°C	86°F	1.00
40°C	104°F	0.99

Electrical Load

			Current (A)					
Number of LEDs	Drive Current (mA)	System Watts	120	208	240	277	347	480
30	530	52	0.52	0.30	0.26	0.23	--	--
	700	68	0.68	0.39	0.34	0.30	0.24	0.17

60	530	99	0.97	0.56	0.48	0.42	0.34	0.24
	700	131	1.29	0.74	0.65	0.56	0.45	0.32
	1000	209	1.98	1.14	0.99	0.86	0.69	0.50

Projected LED Lumen Maintenance

Data references the extrapolated performance projections for the platforms noted in a **25°C ambient**, based on 10,000 hours of LED testing (tested per IESNA LM-80-08 and projected per IESNA TM-21-11).

To calculate LLF, use the lumen maintenance factor that corresponds to the desired number of operating hours below. For other lumen maintenance values, contact factory.

Operating Hours	0	25,000	50,000	100,000
Lumen Maintenance Factor	DSX1 LED 60C 1000			
	1.0	0.95	0.93	0.88
	DSX1 LED 60C 700			
	1.0	0.99	0.98	0.96

Performance Data

Lumen Output

Lumen values are from photometric tests performed in accordance with IESNA LM-79-08. Data is considered to be representative of the configurations shown, within the tolerances allowed by Lighting Facts. Contact factory for performance data on any configurations not shown here.

FEATURES & SPECIFICATIONS

INTENDED USE
The sleek design of the D-Series Size 1 reflects the embedded high performance LED technology. It is ideal for many commercial and municipal applications, such as parking lots, plazas, campuses, and streetscapes.

CONSTRUCTION
Single-piece die-cast aluminum housing has integral heat sink fins to optimize thermal management through conductive and convective cooling. Modular design allows for ease of maintenance and future light engine upgrades. The LED driver is mounted in direct contact with the casting to promote low operating temperature and long life. Housing is completely sealed against moisture and environmental contaminants (IP65). Low EPA (1.2 ft^2) for optimized pole wind loading.

FINISH
Exterior parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures a minimum 3 mils thickness for a finish that can withstand extreme climate changes without cracking or peeling. Available in both textured and non-textured finishes.

OPTICS
Precision-molded proprietary acrylic lenses are engineered for superior area lighting distribution, uniformity, and pole spacing. Light engines are available in standard 4000 K (70 minimum CRI) or optional 3000 K (80 minimum CRI) or 5000 K (70 CRI) configurations. The D-Series Size 1 has zero uplight and qualifies as a Nighttime Friendly™ product, meaning it is consistent with the LEED® and Green Globes™ criteria for eliminating wasteful uplight.

ELECTRICAL
Light engine configurations consist of 30, 40 or 60 high-efficacy LEDs mounted to metal-core circuit boards to maximize heat dissipation and promote long life (up to L96/100,000 hours at 25°C). Class 1 electronic drivers are designed to have a power factor >90%, THD <20%, and an expected life of 100,000 hours with <1% failure rate. Easily serviceable 10kV or 6kV surge protection device meets a minimum Category C Low operation (per ANSI/IEEE C62.41.2).

INSTALLATION
Included mounting block and integral arm facilitate quick and easy installation. Stainless steel bolts fasten the mounting block securely to poles and walls, enabling the D-Series Size 1 to withstand up to a 3.0 G vibration load rating per ANSI C136.31. The D-Series Size 1 utilizes the AERIS™ series pole drilling pattern. Optional terminal block, tool-less entry, and NEMA photocontrol receptacle are also available.

LISTINGS
UL Listed for wet locations. Light engines are IP66 rated; luminaire is IP65 rated. Rated for -40°C minimum ambient. U.S. Patent No. D672,492 S. International patent pending.

DesignLights Consortium® (DLC) qualified product. Not all versions of this product may be DLC qualified. Please check the DLC Qualified Products List at www.designlights.org to confirm which versions are qualified.

WARRANTY
Five-year limited warranty. Full warranty terms located at:
www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx

Note: Actual performance may differ as a result of end-user environment and application. All values are design or typical values, measured under laboratory conditions at 25 °C. Specifications subject to change without notice.
